

TRAINING

Training in the more effective use of application, management, and control of computing. Training 80 FREE from The National Computing Centre Limited, Oxford Road, Manchester M1 1PS. Tel: 061 275 6333. Telex 559962.

NEWS IN BRIEF

Cloud over printing kit

NEW technology at The Times has again gone into limbo, despite agreement being reached with the main print union involved, the National Graphical Association. Following the decision of the Thomson Organisation to sell Times Newspapers, management has decided to freeze further changes in order to save the large sums involved in "buying out" piece-work rates.

Going public

SCANDATA is going public, on November 10 on the Stock Exchange unlisted security market. The company will be placing 400,000 shares - of which 100,000 will be available at 125p a share, payable in full - through City bankers Cayer Ltd. Brokers to the placing are William de Broe, Hill, Chaplin.

E2 million deal

DATA Recall, the Dorking-based word processor maker, has signed a deal to increase its turnover substantially by exporting £2 million worth of equipment to Spain over the next 2 1/2 years. Spanish distributor is Percorp Informatica.

Shows clash

TWO European software shows have been announced for 1981 - and have picked the same dates. European Conference Organisers is to run shows in Paris, Munich, London and Stockholm - to with the Paris venue set for June 1 to 3. But Dutch publishing company Dilettia has just announced Europe Software at Amsterdam on June 2 to 4. Both shows are aimed at an international market, say their respective organisers.

The quality line-up for a great performance

Cincom gears prices to smaller user

AIMING for the lower end of the market and following IBM's strategy for the 4300 series, Cincom has announced a pricing deal designed to bring its range within the reach of the smaller user. The change in pricing strategy is aimed initially at the 4331 user who finds himself threatened with an early upgrade in hardware, due to the CPU-hungry combination of IBM's DL/I database and CICS control system.

'Make PAYE job open to all' - IBM

WITH the government having to decide within the next few weeks if ICL should be the major contractor for the PAYE computer scheme, IBM has publicly warned against ICL getting the job. At the same time the Conservative Bow Group has published a lengthy paper called "The Big Stale"

describing the centralised approach to the project as "a salesman's bonanza" and urging that it should be scrapped in favour of microcomputers in every tax office.

Revealing its nervousness about losing the PAYE contract, IBM went to the unusual length last week of holding a press conference to explain why the single tender policy favouring ICL, which expires at the end of the year, should not be applied.

IBM stressed that highly effective database and communications software was still vitally important despite the more cautious approach to the project recommended in the report just completed for the government by consultants Computer Sciences and Pictel as well as the Inland Revenue review team.

Recommendations in the report, which has still to be studied by the relevant ministers and discussed by the Cabinet, include shelving plans for an online national network linking all the 12 proposed regional PAYE computer centres. But IBM argued that these links still needed to be designed into the initial software structure.

Scaled down

The report also suggests that the pilot system should be scaled down from 2,000 terminals to 500 and from two million tax payers to about 500,000.

Responding to the Bow Group's

information systems," said Booth. Cincom's answer to ICL's, an online program development system called LMS-II, and the database query facility T-ASK will also be available, as well as its manufacturing system MRPS. The company has committed itself to making all future software offerings available on the 4300.

"We're not reducing prices," explained Booth, "IBM seems to be marketing the 4331 almost as a mini with an upward growth path. So we've priced our products according to the structure used. It means that a user can build up his system from a small file base right up to a large system under MVS without conversion."

A small user can start with Total for £210 monthly, rising to £409 monthly for the combination of Total and Environ.

WPs are blacked by town hall union

LOCAL councils in Camden and Tyne and Wear have been hit by industrial action as a result of a ban by local government union NALGO on the introduction of new technology in town halls.

Word processing equipment in Camden's rates department and Tyne and Wear's architect's offices have been "blacked" by the union and will remain so until the respective branches get new technology agreements at a local level.

NALGO gave its local branches a directive to seek their own agreements on new technology after failing to secure a national agreement earlier this year.

At Camden the union branch has instructed 40 administrative and clerical staff - many of whom were upgraded last month - not to use a Wordperfect word processor installed in the rates department over a year ago.

Policy

David Egmore, local branch secretary for NALGO, commented, "We have a current policy of non-co-operation on new technology, so our members won't use the equipment until a general agreement is reached. Further talks are due to take place later this week."

"We want terms that relate to such matters as job loss, training, regrading and health and safety." At Tyne and Wear the union is refusing to let three secretarial staff use a Bixy word processor

Martin warns 'big boys'

PROLIFIC writer and pundit Dr James Martin launched his latest book this week with the warning that large organisations need to change their data planning if they are to cope with the explosive growth in computer applications.

Instancing US figures which predict a 100-fold increase in demand for applications by the end of the decade, Martin's book "Strategic Data Planning Methodologies" is aimed at educating senior management on the need for strategic planning and a providing a methodology which, he says, "the only strategic data planning which works."

In London for the worldwide launch of the book, Dr Martin also quoted US figures which put the cost of a single instruction-line-out commercial program at \$8 and within the Pentagon, up to \$8.

The use of high level query languages, power report systems, graphics and languages like PL/I and APL will provide the tools, he says, but there is a need for senior management to take strategic decisions and not tight control. IBM's Business Systems Planning recognises this, adds Dr Martin but, while

Compec launch

AMONG the offerings Digital Equipment Corporation has launched at Compec was a distributed real-time system for LSI 11 and PDP-11 hardware. Called DTRIS 11, it is a multiprocessor operating system developed by a Dutch company and marketed in the UK by Midelectron. It is said to give a full programming and processing environment.

Unions to resist ICL's 2,500 redundancies

MAJOR staff unions at ICL are to hold a national level meeting next Monday, November 17, to resist the closure of the ICL plant at Winsford, Cheshire, involving the loss of nearly 1,500 jobs. In all, the company announced last week some 2,500 redundancies.

Earlier this week, workers at the Winsford factory were sitting-in as a protest against the company decision. "Our initial reaction was to maximise publicity," said Pat McKenna, chairman of the joint union committee representing all workers at the plant.

He said that 1,000 other jobs had recently been lost on the

Briefing

Viewdata bureaux

HAMBROS Bank, Modcomp and Telemachus of Aylesbury have formed a joint company to operate viewdata bureaux based on Telemachus' TM3 viewdata system. Its first two systems, based on Digital Equipment PDP-11s, have been installed in the new central London office.

A PDP-11/23 is to serve users of the Stock Exchange's Topic viewdata service, and a PDP-11/34 will serve other users. The TM3 system is being rewritten to run on Modcomp Classics, on which further bureaux will run. Viewdata International is the preferred name for the company, but it may call itself Videotext International if Companies House objects.

Bunzl buyer

THIS bureau side of Bunzl Data Systems, which parent company Bunzl Pulp and Paper has been trying to sell since it decided to top out of the computer business two months ago, has found a buyer. It is Rolfe and Nolan, the City of London based firm that runs community broking services on two Digital Equipment PDP-11/70s bought from BDS when it was still in the systems business.

Ring first

FIRST commercial implementation of the Cambridge Ring local networking system has been delivered to Imperial Chemical Industries headquarters in Runcorn, Cheshire, by Orbis Computer, Cambridge-based two-man company set up just over a year ago to supply local networks.

Apple goes public

MICROCOMPUTER manufacturer Apple Computer is going public in the US. The firm has filed an application with the Securities and Exchange Commission for an offering of 4.5 million shares and trading is expected to start next month. The issue price could be as high as \$17 million, valuing Apple at \$825 million.

DR CHRIS WILSON... Employment costs are the biggest element of fixed expenditure.

'Quality of visitors best yet at Compec'

NEVER mind the width... feel the quality. Compec closed last Thursday with exhibitors well pleased with the quality of visitor attracted to Olympia over the three days. "We have been impressed by the volume and high calibre of visitors to our stand," said Hewlett Packard. "This time the quality of visitors is the best we have ever had at Compec," added Real Time Developments.

The total attendance over the three days came to 22,786 - down on last year because the £2 price tag for visitors cut out the schools' parties and general non-industry visitors. Last year numbers grew so large that Olympia was being described as

2900 UPDATE

ICL's long-awaited new model in the 2900 range, code-named 83, is announced today (Thursday), as the medium-scale 2955 and the larger 2968. A new operating system, Concurrent Machine Environment, is also being launched.

Airline order

BRITISH AIRWAYS, which has chalked up many sales overseas with its own software packages, has gone to the Italian State airline, Alitalia, for a cargo routing and control system. Called Fast, it has already been adopted by several other IBM-based airlines.

APL users meet

"NEW directions in APL" is the subject for the next APL user group meeting at the Sheffield Building, Imperial College, Exhibition Road, London, at noon on Friday, November 21.

JOB OPPORTUNITIES: Pages 21-39

US firm attacks Texas' systems market in UK

AN ATTACK on Texas Instruments' UK systems market is under way from one of its OEM distributors in the US, Daxko, which plans to import TI systems into Europe via a new base in Ireland.

The company claims that it will be able to ship the products to Europe and offer them at 40% under TI list prices, with delivery dates of between 21-45 days. Daxko claims that by advanced ordering in the US it is able to meet a demand which TI itself has been unable to satisfy. TI is currently quoting a maximum delivery time out of the US of 90 days, but this includes a full system test at Bedford.

Daxko has built up a stock of TI products in the US which it plans to fly into a plant in Dundalk, Eire. It will give them added value by doing some assembly work, and then sell them to the UK and the rest of Europe.

Good terms

Nicholas Ashton, head of European operations, says that the company is also prepared to sell to other OEMs with minimal value being added in Ireland. But, he says, the company is anxious to remain on good terms with TI. This is Ashton's second attempt to outdo TI: the first involved a bid for MicroFocus CIS-Cobol for TI systems in the UK (CW, July 31).

Ashton, then sales director for Cinal Computer, an OEM distributor for TI based in Norfolk, bid for sole UK distributorship of CIS-Cobol on TI systems. Negotiations are still going on.

The go-ahead for the Dundalk plant came on October 16 in an agreement with the Irish Development Authority, says Ashton. He claims the plant has already taken \$0.75 million of business since then. Daxko expects to sell over \$10 million of TI-based products.

New from Cifer... the 2684 User Programmable Terminal

Introducing the Cifer 2684 User programmable terminal at the top end of the 2600 range of compatible VDU's. The 2684 provides a full 64K bytes of user RAM, supporting industry Standard CP/M operating system with in built 260K byte floppy disc drive.

- In addition to the disc processor system a separate VDU processor provides all the features of the 2632 terminal which acts as a 'front end' processor.
- Dual Z80 processors.
 - Single and Double Density Disc Drives.
 - Full range of CP/M compatible software.
 - Industry standard 24 x 80 Display.
 - Top quality 100 key, detached keyboard.
 - Compact Housing.

For further information on the complete 2600 range contact Cifer today.

The system that distributes itself

IS the charming lunacy of our business fading away? Compec this year seemed positively tame in the gimmicks that were being flashed about. No kangaroos, no birds dressed up as birds... err, girls dressed up as birds. John McNulty's team on the usually bizarre Modular Technology stand were doing some flashing with their new laser communications link, but their get-up was almost ordinary, apart from the roller skates.

Data Data Systems did have an interesting variation on the customised terminal. I under-

stand it runs on pure benzene, and goes from 0 to 10MHz in 4.5 seconds flat, in third gear.

Information retrieval is simple. It just drives down to where the information is, retrieves it, and drives back.

With it you can build the only distributed data processing system that distributes itself.

There was something touching about the biggest company there having one of the smallest stands. IBM was showing its new supercheap terminal. No Indian squaws draped over the screen or anything like that.

I DIDN'T see any ladies swinging from terminals on the ceiling at Compec. But my picture is not a joke. It seems there is a Customs and Excise multi-part form that falls apart when you try feeding it top first into a printer. To solve this problem, the folks at Manneemann Tally have modified their printer so that it can run upside down.

MICHIE'S PRIVATEVIEW

Who killed the desert traveller?

ONE of the new application areas for rule-based computer models is the giving of expert legal advice. This domain shares an attractive feature with chess: much prior formalisation and codification is already available in the form of numerous weighty manuals. At the Rand Corp, Santa Monica, Don Waterman is using his advice language KOSIE to implement a system knowledgeable about the legal liability of manufacturers whose products inflict damage on users. The system must readjust its views flexibly in response to changes in the law.

Conundrum

Most people believe that they understand causation perfectly well. When challenged, some will say that causation can be handled just like implication, which we certainly can mechanise. Actually it is not like that at all.

First, a corollary of "A implies B" is "if not-B then not-A", but a corollary of "A causes B" is "if not-A then not-B".

Second, in contrast to implication, the accepted basis of causation is probabilistic.

Third, in the probabilistic model, transitivity does not hold. By contrast, if A implies B, and B implies C, then A implies C.

Fourth, no-one objects if a chain of implication forms a loop. Looping of causation statements is frowned upon.

The causality conundrum which I have always treasured concerns a traveller dismounting from a trans-desert bus to complete his journey on foot. This man had two enemies, each bent on causing his death. The first had surreptitiously put cyanide into the traveller's water-bottle while still on the bus. The second, not knowing this, stalked the traveller for many hours before he found a chance to pierce the bottle with a well-aimed rifle bullet. The bottle's contents leaked entirely away, and the traveller died a lingering death from thirst.

Perplexed

Both men were in due course arraigned, and both were found guilty of attempted murder. On the charge of murder, however, the court found itself perplexed. Enemy No. 1 pointed out that all possible consequences of his action had been nullified by the escape of the bottle's contents.

Enemy No. 2 pointed out that his action, far from causing death, had prolonged his intended victim's life.

The court eventually felt obliged in logic to accept both the above arguments. But at the request of the jury a rider was entered to the effect that there seemed to be something wrong somewhere.

The Stanford logician Pat Suppes is the author of a computer-aided instruction project which has been bringing literacy to forgotten parts of the American South. Recently he has been thinking about the logic of causality. As Suppes' formalism took shape on the blackboard, my mind went back to the Saharan brain-teaser. Was this the juridical weapon which that sorely tried

Professor Donald Michie is head of the Machine Intelligence Research Unit at Edinburgh University.

court had lacked? Let us try it out (I shall simplify somewhat).

We start with the idea that A is a *prima facie* cause of B if and only if (1) A precedes B in time. (2) A has a non-zero probability of occurrence. (3) B's probability given that A has occurred is greater than B's probability otherwise.

Note that so far this is only *prima facie* causation, according to which, for example, a fall in the barometer reading is a cause of rain (*prima facie* it is). We now get rid of such spurious causes by finding some event C, earlier in time than A, such that (4) B's probability given C and A is equal to B's probability given just C.

In the barometer example, C could be lowered atmospheric pressure (as opposed to barometric reading, which is B).

Back to the desert court-room. Suppes-style, Enemy No. 1, it seems, takes the rap. Enemy No. 2 is acquitted of murder. Is this justice? Hard to say. But No. 1's deliberate action certainly doomed his victim to die, which cannot be said of number 2's. To that extent at least the Suppes calculus seems to give a fairer result than the court's troubled verdict in the story.

Donald Michie

TEN YEARS AGO

From Computer Weekly of November 12, 1970.

UNIVAC took steps to safeguard its position as a supplier of advanced computing systems with the introduction of the Univac 1110 into the market for large computers. An all-out bid by Rank Xerox Data Systems for a larger share of the online commercial market is the company's description of its new Recognition Equipment, to aid the identification of flawed bank notes at the printing stage.

A project to investigate computer-aided menu planning of school meals is being set up by Essex County and Sheffield Polytechnic with Honeywell's help.

Donald Michie

A micro-controlled President Reagan?

TRY as one may, it's hard to come up with a computer angle on Ronald Reagan's victory. It may be that Jimmy Carter was hurt by the allegations over his systems designer son's business dealings in the Philippines, but I don't remember Reagan bringing it up on the TV debate.

In fact, there wasn't much slanging between them on the inadequacies of their policies for information technology, was there?

"What do you plan to do about our microelectronic future, Mr Reagan?"

"Our micro what?"

"Will you call off the Justice Department's pursuit of IBM?"

"I believe in the pursuit of happiness."

"And the New World In-

formation Order? How do you feel about cultural aggression?"

"Well, I come from the culture centre of the world, Hollywood."

"That's exactly the problem, Mr Reagan..."

Both candidates issued statements on privacy, saying it was a good thing, but not saying they would do about it. Perhaps they are tacitly admitting that they don't understand it. That would be a rare piece of honesty.

I can reveal one tightly-kept secret now, anyway. Reagan died several years ago and was replaced by the microprocessor-controlled rubber model of him from Disneyland. There's a faulty solder connection on one of the chips, and that's what

causes his speech to falter from time to time.

With luck there's a fault in the button-pushing finger as well.

FOCUS

Putting the case for Eurocomputing

EVERYONE present at last month's EEC/NCC Telematics Conference appeared only too keen to encourage State - both national and international - assistance and intervention in the computer industry.

Perhaps this attitude was to be expected given that the delegates represented the UK computer industry rather than a UK computer installation. Many DPMs, far from backing the State subsidy line, would hold the view that boundaries in computing do not exist. Whether their IBM kit was developed in Texas, built in Taiwan, assembled in Truro, with software added in Tunbridge Wells, as long as it was cost/performance competitive and had the correct voltage cycles, the contract would be signed.

U-turn

Hardly has the government implemented the "smaller is better" doctrine and clipped the Post Office down to separate sizes, than they are being urged to make a technological U-turn. Viscount Etonne Davignon, Community commissioner for industry and Christopher Layton, EEC director of high technology, made impassioned pleas for more State intervention and control. Otherwise, they hinted, the Americans and the Japanese would run high technology rings round Europe.

Possibly unknown to the EEC delegation, many observers believe that the international technological world has already arrived. Many homes already have their collection of Japanese hi-fi, TVs, foreign cars, cameras and watches. A similar situation exists in comput-

Barriers

A notable problem, it will seem to many DP professionals, is that there is already too much protection. Co-operation between European PTTs, for instance, is far from harmonious. The user and DP sales teams of the user and PTT departments. The PTTs are anxious for withholding type agreements, providing add-on services and being generally unco-operative. If the EEC boot can stimulate some PTT drive and enthusiasm, great. If not, then they might as well pack their diplomatic bags and return home.

The EEC would like to see the monetisation between all member states. So too would the DP sales teams, especially in such areas as privacy and data transmission. Layton suggested that telecommunications were the railways of the electronic age. Unfortunately, the monetisation buffers would stop the train, short of Dover, or Calais, or not at the International Communications Network Junction.

That Europe should take concerted action against the massed ranks of American and Japanese invaders is obviously desirable. Equally, obviously, it is unobtainable.

ICL sheds 2,500 jobs

From front page.

current Ashton payroll of 800 to handle the workload transferred from Winsford.

Doubt was cast on the future of the Winsford plant earlier this year when ICL admitted that 400 redundancies were to be made there. Also hit hard by the cuts just announced is the ICL marketing division where 400 jobs are to be axed on the services side, mainly at Letchworth and Slough.

The cuts also include 100 at ICL's Putney headquarters and another 300 in manufacturing at various locations around the country.

Italy leads with IBM distributed processing

IBM users in Italy are leading the way in the adoption of distributed processing with the UK-built 8100 system in at least two major application areas.

The Istituto Nazionale Previdenza Sociale INPS, (equivalent to Britain's Department of Health and Social Security) is installing nearly 300 IBM 8100 machines throughout Italy. This is more than any IBM user in the UK has in its plans, let alone on order.

Meanwhile, the State airline, Alitalia, is pioneering the use of the 8100 for distributed revenue accounting at locations all over the world.

In both cases the 8100s will be supported by IBM's Systems Network Architecture so that overall systems management and development will stay in the hands of the mainframe site.

Way ahead

INPS is already way ahead of ICL user DHSS in the adoption of local interactive processing, having opted for IBM's first SNA supported distributed processing system, the 3790, four years ago.

A formidable line-up of 270 of the systems, with a total of over 3,000 terminals were installed at the 130 INPS offices throughout Italy for handling data entry, local database inquiry and update, response to customer inquiries, pointing for local customers and office administration.

Benefit can now be drawn from any office anywhere in Italy by any of the 35 million individuals on the INPS database in Rome. The central site, where hardware includes a 3033 MP system, handles inquiries that cannot be serviced locally. It also maintains historical records, cross validates transactions and generates statistics.

Each local office is equipped with two 3790s, one for handling social security contributions from employers and the other for processing payments to pensioners and other claimants.

The 3790s, most of which have

been in operation now for three years, were all leased and are now being replaced by 8100s. The newer IBM machine effectively superseded the 3790 and offers attractions like more power, bigger disc storage and the 3775 video terminal with its advanced features like eight screen partitions.

About 130 of the 8100s are already in full operation and all the 3790s should be phased out by next year.

Alitalia is one of the leaders among IBM-based airlines in developing software systems for new applications and its latest major project is Pracsys, Passenger Revenue Accounting System. It will unload jobs like sales and agent management, billing and credit control and some ticket voucher reconciliation from the airline's central system in Rome.

By 1983 there will be 16 sites with the 8100 worldwide - four each in Italy, the remainder of Europe, the US and the Far East.

Support

Each machine will support between 20 and 50 terminals and will replace about 15% of the 200 concentrators all over the world that link IBM 3270 type interactive terminals into the Alitalia network. But the 8100s are all being installed at major locations so they will end up handling about 70% of the traffic.

The airline has estimated that it will save \$35 million over a six-year period using Pracsys, partly through cutting down on line usage but mainly through estimating the staff required in Rome at the moment to capture data from ticket vouchers that pour into the Alitalia computer centre from its offices all over the world.

With Pracsys on the 8100s all ticket voucher data will be captured locally and will not be transmitted to the Rome centre at all unless there are complications like flight changes.

Alitalia considered alternative systems to the 8100 before opting

DMS to be used

IN their development of systems on the IBM 8100 both INPS and Alitalia intend to make some use of DMS, Development Management System. The production version which optimises code for live execution is scheduled for shipment by the end of this year.

Facilities provided by DMS in-

clude the capability to develop and test complete applications programs interactively, including map definition, data definition, field and data editing and application logic development.

In live execution programs can communicate with CICS and IMS/VS on a host mainframe.

Midlectron evaluates Dutch office network

TERMINAL and system supplier Midlectron of Belper, near Derby, is evaluating a Dutch office networking system it may market, which is designed to enable programmable terminals that use the Digital Equipment LSI-11 processor to exchange files and share hard disc storage.

The system is based on DRTS-11, a modified version of Digital's RT-11 real time operating system implemented by Westvries Systems of Heemskerk, Holland. It supports Westvries' Qnetor direct memory access communications board which plugs into the Q-bus on the LSI-11.

Qnetors use 40-way ribbon cable and communicate over 25 metres at 100K 16-bit words a second in blocks of up to 32K words. Each one has a bootstrap ROM which automatically loads the RT-11 operating system into the terminal from the central file.

store when it is switched on, while the main processor controlling the filestore, printers and other shared peripherals runs the DRTS-11 version which enables it to service requests from user terminals.

The boards, cables and software for a main processor and three user terminals would probably cost about £7,500 and the system is likely to be marketed by Office Computer Techniques of Leicestershire.

This is one of three experimental companies set up by Midlectron.

Takeover

US telecommunications company Micom has acquired Borer Electronics, a UK data modems company, and created a joint venture company Micom-Borer, which will be based in Reading. The subsidiary will operate under existing Borer management.

Rival for DEC disc subsystems

DIGITAL EQUIPMENT users having trouble getting a disc subsystem from DEC itself could give System Industries Europe a call. The independent supplier of DEC plus compatible disc subsystems has introduced a service called Site, System Industries Trade and Exchange, offering DEC kit that it has taken out of customer sites all over Europe.

Working-based System Industries Europe has also announced expansion plans, following the \$5 million share issue in the US by its California-based parent company (CW, September 11). Apart from expanding its work-force it is pressing on with the development at Woking of products for sale by System Industries and its agents world-wide.

Once of the new products, the 9800 disc system, is said to be unique. It comprises a standard 80-megabyte CDC 9762 storage module drive into which a 165-megabyte 14-inch Winchester drive built by Fujitsu has been embedded.

The package offers 137 megabytes of fixed and 67 megabytes of exchangeable storage, and System Industries points out that it pro-

vides the capacity of three RM02-RM03 drives. The Winchester unit is divided into two logical RM02-RM03 units on one drive and operates totally independently of the CDC 9762 to the extent of having a separate power unit.

Relational DBMS for HP kit

A RELATIONAL database management system for the Hewlett-Packard 3000 series has been launched by Computer Resources in California. Its data structure is said to be represented by a simple two-dimensional table rather than by the conventional, more complex structure.

Called Relate 3000, it is aimed at users who need a database but cannot afford the high costs involved in a standard database (complex data analysis, training, and sometimes extra memory).

Licensing fee for Relate 3000 is \$10,000.

We'll get your **Starplex** development system up and running every time you use the 8048/49/50, Z80, 8080/8085 or our new NSC 800, 8070/72/73 series.

going

Starplex, the ideal development system! Practical, compact styling. Complete hard and software. Configuration with Display, Floppy Disc, Memory and Printer. In-System-Emulator for supporting above mentioned microprocessors (universal application). Modular construction. Efficient (efficient hardware concept). Proven technology, therefore highly reliable (standard modules of National's single board computer program). Excellent price/performance.

STARPLEX is a trademark of National Semiconductor. The National Offensive for the 80s.

PROGRAMMERS' PAGE

Do code-cutters still have a role to play?

A DISCUSSION entitled Qualified Programmers - Where to Get Them was bound to attract a large audience at the IFIP conference, especially with a panel of controversial and witty commentators like Heinz Zemanek, Wlad Turski and Herb Grosch.

The large audience duly turned up - though, as someone on the way to the talk said, it was debatable whether they were all looking for programmers, or simply attending one of the few sessions they thought they would understand!

There was plenty of scope for clever remarks and quite a few valuable ideas, but a good deal of re-tracing of old ground and a general lack of shape to the discussion.

To begin with, no one had agreed on an adequate definition of terms. Who were these "programmers" we were looking for? It was plain that most of the panel and delegates were no longer looking for the pure "code-cutter", but for something in the nature of a programmer/analyst, with an overall understanding of business or scientific problems and how to solve them effectively with computer aid.

Yet still, it was pointed out, there were interminable requests for "programmers with two years' Cobol experience", as though that meant something in the context of real requirements.

How to think

Herb Grosch took the opportunity to tear into personnel officers,

accusing these "asinine" people of being at the bottom of such mis-selection by reference to meaningless "experience". In cutting Cobol code, they probably would not recognise a good quality programmer if they saw one, he said.

In fact, what was really being discussed was quality rather than qualification; which made the title of the session rather inaccurate. Qualification was touched on briefly and indirectly in the perennial discussion of the relevance of university courses.

In France, said J. Arsan, universities had begun by teaching their students programming languages. Now they were being taught "how to think", in the kind of way outlined by Jacques Hebenstreit in the education session. But employers, he agreed, did not recognise the change in training methods and persisted in asking for proven Cobol writing capability.

Angry

There was something to be gained, Arsan added, by putting prospective programming students through a normal university mathematics course; it would at least prepare them for flexible thinking in an industry where everything changed every few years.

Perhaps, Grosch suggested, there was still a role for the Cobol code-cutter as an entirely separate occupation from the competent programmer. The code-cutter, he suggested, could spend his time on the despised "maintenance work".

An angry voice (probably Professor Turski, but at that point it was difficult to see) grumbled something about such work being "beneath human dignity", and that any firm which required a program to be rewritten for the umpteenth time "deserved to die".

Turski favoured the inculcation of what theory had been learned so far in programming as the only way to train. "It is difficult to teach, and impossible to train, when you have no theoretical foundations." The relevant theory for "programming in the small" was already with us, he argued, and appropriate theoretical foundations for the more complex programming tasks now confronting us was bound to emerge in due course.

The requirement for undisciplined maintenance work, Australian J. Poole pointed out, came largely from badly-written programs in the first place. Through using newly available techniques to create readable and adaptable software, to create it quickly with the aid of tools and to create it so that it would be portable, one could remove a good portion of the programming forces which industry thought it needed, and arrive at something nearer a manageable supply-demand situation.

Grosch identified an interesting and potentially growing source of programmers among the computer hobbyists. "This was the way we produced programmers for the Univac 1," he said. "People were doing it as an interest." Now, with cheaper computing equip-

ment available, the "hobbyist" source of programmers would be bound to arise again.

Whether these would necessarily be good programmers, and whether the quantity from such sources would make up for the quality was, of course, an important point, and though mentioned, was not tackled by the panel in depth.

Original

F. Bauer of West Germany suggested an original method of ensuring good quality programs, with a formal software contract between programmer and user - formal in the mathematical sense, ensuring that all aspects of the problem and requirements of the program were understandable to both parties, or if not, then at least to their lawyers.

We might, he suggested, have to evolve a special type of "software lawyer" to handle the wording of such contracts and act as intermediary between the parties.

The paradigm of a formal legal document was a bad one on which to base the formalisation of a program, Grosch suggested. A better framework might be that of formal logic. People who couldn't master logic, he suggested, would not be able to program.

The possibility of automating education and training was one which bore examination, Grosch said. "If we shovel people into Plato (the Control Data computer-aided education system), those

WITH its new name, descriptive rather than numerical, Programmers' Page visits the land of Kroner margarine and Kangaroo beer.

Out there the IFIP conference took place recently, and included a possibly misnamed session on getting more programmers. In fact, reading not only between the lines of our man in Melbourne's report, the emphasis was more on the quality of competent programmers and the necessity for their analytical skills.

The background experience you need and the training programme recommended, to rise above the role of a mere "code-cutter", are also quite formidable. You experienced programmers out there, sitting innocently at your desks about to put pencil to coding sheet, should have (a) a university degree in maths, (b) an automated education, and (c) a good software lawyer.

who don't like it probably won't make good programmers. I'm not suggesting all those who like it will make good programmers, but a good proportion of them will."

Software engineering met with a mixed reception. For Poole, its value was dubious: one could design a very elegant car, he said, but the crucial point was whether it would run.

A truly well-designed car, and a truly well-designed program, Turski retorted, would run, by definition.

H. Maurer, of Austria, was the

TO create this week's problem, I first calculated the area of 16 different right-angle triangles, all having integer sides. Then I added another number which cannot be such an area. Your job is to find this seventh number by scrutinising the list and also state what precept was involved in making the identification. See page 37 for solution.

by Pamela Rowe

IFIP MELBOURNE

From my own past experience I would take issue with the statement that maintenance work fits only for the lowly. To understand and amend successfully another person's logic, program and layout style, requires at least as much skill as writing your own. However, here are some interesting insights into programming half a world away.

best prepared of the puzzle with the results of an intensive survey conducted specially for the session, and aimed at finding out how users saw programming as what kind of programme they were seeking. There were no unexpected replies, and a good deal of the illuminating information, he admitted, was in unexpected remarks on the questionaire. When, for example, I asked whether the use of software packages would increase, "no" said "hopefully, yes" and others "unfortunately, yes".

SOFTWARE FILE

Easing out engineers' pencil and paper methods Control system first for Unix

PROFESSIONS that used to rely on paper and pencil or a slide rule are being steadily invaded by computer techniques - and civil engineering is no exception.

INTEREST, an interactive estimating system, has been designed to make the transition less traumatic for civil engineers who are used to their well-worn manual methods of estimating for jobs.

The package was developed in Fortran by the Computer Aided Research and Development team at Loughborough University of Technology, a group which includes MSc postgraduates studying construction management.

It was developed to take the drudgery out of estimating without forcing a standard method on users whose methods and costing procedures vary. Its four main areas cope with the storage and retrieval of estimating information (either standard or from the user's own data); the assembly of unit rates using the estimator's own skill; automatic calculation and extension of the bill; and

documentation before and after the tender.

The user is led through the system by menus. He can refer to a work group already stored on file and change it until the make-up is satisfactory, or build up a rate from stored or newly entered data (cash rate).

Items can be retrieved and their price changed, in case the circumstances of the job are altered. The system looks up standard Civil Engineering Standard Method of Measuring Reference Codes.

Once overheads and surcharges are added, the entire estimation is broken down into an "item make-up" which gives a description of what is needed in the way of plant, labour and material to create the structure. The costs and other elements can be expanded or modified thereafter.

The system is being sold by Genesys, which markets the widely used and comprehensive graphics system Gino. INTEREST can be used on the Genesys Design Centre mini with other design elements.

Control system first for Unix

THE advent of another Unix-type operating system (Software File, October 28), this time on Perkin-Elmer's 32-bit minis, marks the first time that the Unix Source Code Control System, SCCS, has been made available with the current version of Unix.

The Perkin-Elmer version is called Edition VII Workbench. It is based on the Version 7 Unix by Bell Laboratories and comes from the Wollongong Group in California, one of the many companies which have sprung up to provide Unix development and support in place of its originator Bell Laboratories, which is prohibited from supporting Unix itself.

The SCCS is a software development and management facility which provides audit trails for program modules and allows programmers to record changes to source files, documentation and data.

Although the SCCS was available for Version 6 of Unix, it had to be added on to the Version 7 that the company acquired from Wollongong University in Australia.

The Wollongong Group supports its operating system on Digital Equipment PDP-11s as well as the Perkin Elmer range, supplying maintenance and documentation as well as a week's training, and aid during installation.

A single user licence for the product costs \$12,000, including system generation and initial support.

Compec-style software shows

THE race is on to provide European software vendors with a bazaar similar to shows like Compec at which hardware merchants get the chance to display their wares.

Already two rival companies have announced schemes for software shows in 1981 with dates that collide (CW, October 6). The whole idea of showing software is so new that the market may well have room for different formats, and it is worth taking a closer look at how the organisers propose to go about the business of putting buyer and seller together.

Executive Conference Organisers has released details about Soft 81 - a series of conferences and exhibitions to be held in European cities next year. Two-day conferences combined with three-day exhibitions of software are being pitched at large users and microsystems houses.

In London, September 2 to 4, and finally one pitched at the Scandinavian market in Stockholm from November 18 to 20.

Involved in the shows are the European Computer Services Association, Adapsco, and vendor committees on both sides of the Atlantic which will determine the "shape" of the event. The idea is to give an international forum to companies which might wish to be involved in all or just their own native show.

The Europe Software show to be held in Holland, on the other hand, is designed for its own national software market and will host a large number of Dutch software companies, some of which have already registered. The international companies are expected to put in an appearance mostly to keep an eye on the Dutch market and make contacts for agencies. There will be a conference - added as something of an afterthought - as well as the trade fair.

Dr Adi Coyajee of Diligencia and of Computastars fame admitted that the clash of dates with ECO's Paris show was "a nuisance", and added: "It's a great shame that a British company has to organise a software show in

Paris". Diligencia is essentially out for the same market - although limited to Dutch users - of genuine, informed and qualified visitors.

Both ECO and Diligencia are determined that the exhibition should be dedicated to the field of software with hardware kept firmly in its place - providing online connections with remote machines, for example.

Unsure

Whereas Dr Coyajee admits that he is unsure what the exhibition will actually look like, Robert Joseph of ECO has very clear cut ideas. Exhibiting companies will be invited to hold individual presentations for attendees, whose entrance to the show is free.

As well as booths, vendors will have rooms behind where they can retire to sit down and discuss the requirements of a potential customer in detail.

THE UK subsidiary of Japanese electronic firm Matsushita, Panasonic Business Equipment, has announced a range of software for use with the recently introduced desk-top computer, the JD-800 U.

The range covers standard business needs with ledger systems for sales, purchases, nominal, and payroll facilities. There is also a stock control system and a word processing option.

Panasonic gives £8,800 as the price for a typical business system comprising three ledger packages and a printer. Panasonic's software manager Derek Hipkin (centre) demonstrates some of the software.

Wanted: one owner. Low mileage

THE American Computer Group has just set up a new subsidiary: the American Used Software Company. "Used software is the best kind," said president Bill Grinker, defining it as working or proven.

As its first software product for the Digital Equipment market, the company is offering DRS, a database management system which is said to have been in use "with over 100 satisfied users" for 11 years.

IT'S AMAZING THE COMPUTERS SOME COMPANIES HAVE BEEN TALKED INTO.

When was the last time you talked to a computer salesman? Really talked, that is. Think back and you'll probably realise it was they who did most of the talking.

We have a rather different way of doing things. We believe the best way to ensure that customers get what they really need is for our salesmen to be good listeners. It's to do with the fact that Sperry Univac offers a comprehensive range of systems. And that each system has a wide range of capabilities.

Sperry Univac is a division of Sperry Ltd.

With such a versatile and comprehensive choice, we can precisely tailor each installation to the real needs of that customer. And we couldn't do that if we didn't listen.

Our way, customers don't get sold totally unsuitable systems that just happen to fit the budget. Or get talked into systems that are far bigger (and more costly) than they really need. Or get stuck with a system they'll soon outgrow.

If you're thinking of upgrading an old system; or installing your first; or just feel like talking about computers, then call us in. Post the coupon. Or call us on 01-248 2686.

Instead of giving you any old sales talk, we'll simply come and listen.

Post this.
We'll come
and listen.

I'd like some general literature on Sperry Univac computer systems.

SPERRY UNIVAC
The computer people who listen.

Clashes

The first show, at the Palais de Congress in Paris, takes place on June 1 to 3 and clashes with the Dutch show set up in Amsterdam by publishers Diligencia from June 2 to 4. It is followed by a show in Munich on June 10 to 12, another

CAP and Pru joint insurance system to be offered in City

AN INSURANCE system developed jointly between major software house CAP and its clients, Prudential Assurance, is about to be released on the underwriting and accounting community.

The general branch insurance system was originally written to support two departments within the Pru - the treaty underwriters and associated accounts departments. The system handles current and historical underwriting/ accounting data and a wide range of insurance treaty business.

Prepared

Data required by the Department of Trade and the British Insurance Association as well as the company's own accounts is automatically prepared, along with other necessary data about treaties and estimates.

APL-PLUS VM
FOR
Easytrieve
01-242 8135

The Pru runs the system on an IBM Series 1 although it was originally developed on a Digital Equipment PDP-11 using CAP's own MicroCobol. Since the language and its operating system BOS are transferable, the changeover presented no problems. This indicates that potential users could run it on many different machines.

Infotech report

THE lifespan of software and the problems of maintenance are dealt with by the latest State of the Art Report from Infotech. The two-volume report is titled "Life Cycle Management" and is available from Infotech for £150.

Update

THE New Jersey computer services firm Rapidata has announced a new element to Futurcash, its financial management system. The addition, Management Plus, allows financial analysis and planning of assets and liabilities. It operates on historical, budgeted and actual data to create a picture of a company's financial standing.

Microcode assist

MAGNUSON is to develop microcode assist features for Cullinane's IDMS which are expected to be ready by early 1981. Magnuson is using its microcode technology to speed up the most frequently used portions of IDMS routines.

THE BIG MATCH WITH THE LSI 11® & PDP 11®

WINC 01 -
FLOPPY DISK
WINCHESTER DRIVE
This controller connects a Winchester type drive to the LSI bus via a dual height board. The WINC01 fully emulates the RL01. The Markman drive is partitioned to represent three RL01 disk drives realising 15 Mbytes total capacity with 17 Mbyte cartridge tape for backup and program load. Runs RL01 diagnostics.

FLEX 02 -
FLOPPY DISK
EMULATOR
This dual width floppy disk controller completely emulates the RX02 on the LSI 11, 11/2 or 11/23. Available with either single or double headed drives, it runs RX02 diagnostics and has on board self test and bootstrap. Reads and writes both single and double density (RX01 or RX02 format) data on IBM 3741 type diskette media.

STORM 02 -
RM 02
EMULATOR
This unit fully emulates the DEC RM02 disk system on the UNIBUS. A hex card plugs into standard SPC slot and controls up to 4 x 80 Mbyte drives. It is software compatible with PDP 11 Operating Systems that support the RM02. It has disk pack interchangeability and is compatible with a wide range of drives.

OP SPOT

'Ops have insecure jobs — that's why they need a union'

Tim Webb is a national officer of the 470,000-strong Association of Scientific Technical and Managerial Staffs, ASTMS. In putting the case for his union, in a recent pamphlet entitled Computer Profes-

sional: Image and Reality, Webb was anxious to dispel the illusion that the computer trade offers unlimited job opportunities. In this interview he says why he thinks ops should be unionised...

PAUL FISHER: Do you think computer operators need to be unionised?

Tim Webb: Certainly. I think they've needed union representation for a long time because theirs is an insecure and often transient kind of job. They tend to be fairly young and something like 20% of them are female. Although this isn't a very high proportion, it's a lot higher than many other professions. The working conditions of operators are often not all they could be. They work in enclosed spaces, and while the ventilation is good, there is not always a lot of light.

PF: Some would argue that, as the demand for ops exceeds the supply and as swift promotion is open to them, there is no necessity for them to join a union.

TW: Two points there. Recent surveys have shown that the demand for operators is drastically down. Therefore the ability they had to negotiate with their feet is considerably less than it was two or three years ago. As far as swift promotion for operators goes, I don't think this is the case. The limit to which you can go on the ops side is to become a chief operator and maybe a DPM. But that's about it. There's not the career progression open to them that there is for, say, a systems analyst. So unless they are restrained from one discipline to another career prospects are limited.

Hostility

PF: In the light of the hostility that some of management feels towards computer staff joining a union, perhaps it's not in the interest of an operator to get involved if he or she wants to progress a career.

TW: Well, I'm not sure there is that much hostility. By and large we have a good working relationship and find that we can be of help to companies which don't have proper contracts of employment and don't understand how to deal with their staff adequately. Nonetheless we have had bad experiences with a few companies. These companies have the idea that as soon as operators join a union they are going to put the screws on and grind the company into the ground. There are some companies which try and buy off their operators with, perhaps, a Christmas bonus or a good salary increase one year. But if the

operators have a basic grievance, they will tend to join a union. PF: What advice would you give to an individual op working in a non-unionised place who wanted to join a union?

TW: I would certainly advise anyone to join a trade union. Normally what they do is to have some form of organisation at the site. Then they could contact our local divisional office and things would start moving from there.

Tactics

PF: You'd advise them to join ASTMS?

TW: We organise more computer staff than any other union in the country and spread right across the private and public sector. The spectrum of trade unionism has risen right to the top. We organise very senior computer staff, including managing directors.

PF: Why not form a staff association?

TW: Staff associations are usually employer sponsored and are one of the tactics employers use to head off a trade union. They don't really work because they are of a consultative nature and not a negotiating body. If you had a bad cough you'd go to a dentist rather than try and organise something yourself. In certain circumstances people must have access to professional advice which, in the case of a trade union, is based on experience at other firms. What sometimes happens with staff associations is that they have the potential to provide a vehicle for entry into a trade union. People have at least got to get together, even in an ineffective form, and I can think of a number of instances where a staff association has voted en bloc to join ASTMS.

PF: Could you sketch out what other unions are available to ops?

TW: You've got Apex, a clerical union which tends to be for lower grade computer staff in the private sector. Then there is Tass for the engineering industry, so they wouldn't normally organise bureau people, for instance. At ASTMS we believe there is a common occupational identity of computer staff which runs across industry.

PF: Is there a case for forming a union simply for ops?

TW: No case at all. To have off operators from other computer staff artificially, or even while collar workers in general, would be absolute nonsense in our view. We like to believe that all our members have some kind of cross-fertilisation of experience. One of our aims is to see more operators trained and retrained to move across and up on to another career path.

PF: What would you say to the assertion that by unionising ops you are bringing strife to the computer industry such as has been seen at The Times, British Leyland and British Steel?

TW: It takes two to fight. We don't go out looking for strife. What we want is peaceful industrial relations where our members get a proper share of the cake. Every organisation has some debate about the disposal of resources and the share of the profits available. We don't want that debate restricted to the boardroom. We want the employees of a company, who are often the experts in many areas, to ensure they get a fair reward. We think it's a pretty democratic way of looking at things.

Clash

PF: Do you see a danger that, if ASTMS is representing both ops and programmers, there will sometimes be a clash of interests?

TW: Our structure takes care of that because groups are formed based on occupations—operators, systems people, managerial staff and maybe data prep. If there was an issue which affected ops, they would have their own representatives who would negotiate directly with management. At the second stage, if they could call for the assistance of a full-time union officer. They wouldn't have people representing them who didn't know their particular problems. If it was a common problem like pensions or holiday arrangements for the whole of the company, then each of the representatives of the various groups would

PF: Do you argue for a closed shop

INTRODUCING, from left to right, the present operations staff at the Municipal Mutual Insurance site in Maidstone, Kent: Dale Strickland Clark (systems programmer), Mike Roney (contract operator for four days a week) and Ian Cheeseman (superintendent of computer operations).

The aim is to have eight staff handling ops work when the system is fully running but this will not be for another three years. Once there is a full staff complement, Cheeseman would prefer no one to have a tightly defined role. Ideally he would like to see data control, operations and systems programming all in the same department.

Municipal Mutual handles local authority work—Ally Pally, police cars, schools, employees etc. Eventually the system will assist in this work and also in an extension of the business into private work. The main application language is Cobol, although Fortran is being used in the preparation of actuarial tasks. Since being installed at the beginning of the summer, a statistics package for life assurance has been prepared and put into action. The end of the line will be an extensive networking service. The Maidstone installation is all-IBM, bar one piece of kit. There is a 4331 processor, 256 megabytes of disc store on 3310, a pair of 8809 tape drives, a 400 line per minute printer and six VDUs.

TIM WEBB: "Operators are often housed in what is euphemistically called the lower ground floor. There is a high degree of grievance among them."

go in together and meet the management.

Strikes

PF: I have heard it said that unions like ASTMS are anxious to recruit ops as members to exploit their potential industrial clout. Ten ops going on strike can cause enormous disruption within a business.

TW: Two things here. I don't believe operators are necessarily that powerful. On occasions their industrial power is exaggerated for political reasons to persuade them that if they join a union they will have a company by the throat and are therefore being disloyal. And secondly we have no way of making people do things they don't want to do. We don't go out and formulate a policy and then say this is what you should be doing. Neither I nor the National Executive can instruct a group of operators to come out in support of, say, the foreman or the clerical staff. People being what they are will either take action for themselves as a last resort or, if they feel that another group is being particularly discriminated against, on behalf of that group. This cuts both ways as some may feel that the operators deserve a bit of support. That is their decision. We have no way of making anybody take an action they don't want to.

PF: But, on occasions, doesn't the union make people go on strike?

TW: No way. I wish we could sometimes, but we are democratic.

PF: Do you argue for a closed shop

PF: Do you argue for a closed shop

by Paul Fisher

Just a mini hang-up

A FALSE floor has its uses: it hides cabling, porn, dust and materials that people like to be out of the way.

One enterprising, little thinking op decided that the floor (or lack of it) would serve as an excellent pit so he could escape the underlife of his Mini.

At 2-o'clock in the morning he managed to drive the thing through the entrance of the computer building, but unfortunately got stuck on a half-hanging. It wasn't like the final scene of The Last Job when Michael Caine, his legs and his coat of gold, fell left testing on the brink of a Alpine cliff.

This particular cliff-hanger has an unhappy ending. When it daytime workers arrived they had to clamber over the stranded in- and the op was fired.

Groundless rumour

TELEPROCESSING, I am told, is one of those new areas in which the ambitious op ought to wander. But like most wonderful new areas in computing, it is attended by some basic practical problems. Take the case of Micro, an insurance firm from Essex, I have heard about its TP network going down because a man was trying to find out if his wife was having an affair. I have heard that a man had been pulling my leg about the coffee dispenser.

Whether or not it's one of those groundless rumour machine rumours or not, the interesting idea — a telecomm network with millions of pounds worth of shiny technology being mysteriously thwarted at eleven — is a good one. Goodbye to the QWERTY keyboard and welcome to the last word in dumb terminals.

Looking for a move into programming

AN operator, who wishes to remain nameless, wants to make a familiar move from ops to programming. He has been with British Rail for over ten years, first as a telecomm technician and then as a minicomputer operator.

He feels that within BR ops are not encouraged to progress and he is tired of the monotony of what he describes as a data feeding job. On paper his qualifications are good, and include a BSc in maths and the completion of a three-year evening course in Fortran. He has made many applications for a programming job both within BR and in response to CW ads.

As yet he has had no success. I suggested he contact the computer consultants and systems houses listed in the Computer Users' Year Book. Other than that he was not able to give him much help.

anybody has any useful contacts for him I'd be glad to forward them and do any good deed for the day.

Factory forum

A TWO-DAY forum called the Operations Factory starts on November 18 at the Mount Hotel, London. Picked at by managers, the event will seek to draw parallels between industrial production and what goes on in the operations department.

Interested in attending should contact Bernadette Sullivan at 01-262 3910.

MICRO NEWS

Off-the-shelf software from TI

USERS of Texas Instruments' 9900 16-bit microprocessor family will now be able to buy off-the-shelf software packages and optimise them to their own needs using the company's microprocessor Pascal development tool. Component software, a concept originated by TI in an attempt to reduce software costs (CW, August 14), has reached the arms of the company's nine UK distributors.

The concept was described in detail at the company's set of one-day seminars, Interface 80, held last month at the Talk of the Town. The event was organised by TI as part of a marketing campaign called HIT (high-technology in-stock thrust).

The core of component software, the real time executive, is a type of bus having a set of standards and conditions to which plug-in software modules must conform. In this way, software packages can be written for the "typical" user to plug-in to the bus.

TI relates it to Intel's RMX 86 operating system in terms of capability. However, the real time executive is available in 6K bytes while the RMX 86 takes up 28K bytes. Geoff Bristow, TI's microprocessor product marketing manager, told CW that the real time executive will be available in 3K bytes in a month's time.

If the user's needs are not completely satisfied by the off-the-shelf product, the microprocessor Pascal development tool can be used for modifications. File manager is the first of the component modules to be available, but more are to come.

Over the next two months, TI will be releasing a Maths pack for floating point arithmetic, a communications serial port controller and a data types package. Even-

tually it will have subsets of the real time executive on silicon.

Another product described at the seminar was "words off the shelf", which TI has termed the orator concept. The user can select the words he needs from a library of words, 200 now and 1,000 by the end of the year, and the distributor can place the speech synthesis coding for those words on to EPROM.

TI also announced a new speech synthesis chip, the TMS5200, which should be available in the first quarter of next year. The 5200 can receive commands from either the microprocessor or the 8-bit data bus, can receive speech data from the host system direct and from the ROM storing the speech code. It is also TTL-compatible and can generate interrupts.

Model

The LPC (Linear Predictive Coding) method that the company uses is claimed to achieve lower data rates than other methods. This means that a single word can be stored in a smaller space of memory. But the method does not produce the same quality as that attainable from some other methods. It incorporates a statistical model of the vocal tract and involves a prediction algorithm.

TI also talked about its new TM9900 range of Eurocards, of which four are available from distributors now. These include the 990/E150 CPU board which comprises a 9981 processor, 1K byte of static RAM, 8K bytes of EPROM, six external interrupts and a timer; the E350 input board; the E51 output card; and the E252 bubble memory board which comprises 92K bits of bubble memory and a 20-bit address.

The TM9900 range is based on

Motorola foresees a mixed future

THE UK semiconductor market is likely to grow at a rate of 6% in 1981 to reach a value of \$68.5 million, according to Motorola. The home electronics and automotive markets are likely to be depressed while the computer and microprocessor applications markets are forecast to be strong and growing.

According to Dedy Saban, director of marketing for Europe, the overall European semiconductor market will only be growing at a rate of 3% more than the UK market. The company's annual market review forecasts that this market will continue to be weak at the start of next year, but will start to recover in the second quarter to reach \$3,860 million.

Worldwide, the picture is similar. Motorola predicts that total world growth in 1981 in the semiconductor market will be 11%. Of this total growth, the US is expected to grow by 11%, Asia by 12%, Europe by 9% and the rest of the world by 14%.

The German market is predicted to grow at a rate of 8.5% during 1981, with most of the growth being in integrated circuits. France is forecast by Motorola to have an above average European growth rate of 8.5%. Scandinavia is expected to grow 10.5% during 1981.

On the product side the major growth area over the next five years is predicted by Motorola to be in MOS technology with a 27% growth rate. Total integrated circuits will grow at 21%, while discrete devices and linear products will grow at 6% and 14% respectively. These figures are all about half of those recorded over the past five years.

Motorola's own growth across the whole of Europe was 39% in 1979 and will be about 30% in 1980. The company forecasts that it will itself be number one in Europe by 1984.

According to the review, the automotive equipment market, which is now valued at \$98.4 billion, will be worth \$195 billion in 1985. The computer market will be worth \$19.5 billion in 1985, compared with \$9 billion now. The consumer, communications and industrial equipment markets will almost double in value by 1985 to \$26 billion, \$20.5 billion and \$21 billion, respectively.

Growth rates for 1981 are predicted by Motorola to be 13% for semiconductor in the automotive field, 14% in the computer field, 15% in the communications field, 11% in the industrial field and nil in the consumer field.

The European microsystems market is predicted to grow 38% over the next year. Development systems are expected to grow 22%, box level systems 42% and board level systems 50%.

Games by post

SOFTWARE games packages for the Sinclair ZX80 and the Sharp PC1211 portable computers are now available from the mail order company Syntax Software, based in Ilford. The cassettes cost £5 and £7 for the ZX80 and 1211 respectively, and contain five games. For details apply to 96 Collinwood Gardens, Grants Hill, Ilford.

by Eileen Stainer

Low power consumption

A CMOS VERSION of Intel's 8048 single-chip 8-bit microcomputer which uses only one-twentieth of the power of the NMOS version has been developed by Nippon Electric. The device is expected to be in production in volume quantities by next March.

Like the PD8048C NMOS version, the PD8048C CMOS version features a power consumption of 30 microwatts in the operating mode at 6MHz and of 50 microwatts in the standby mode. It has 1K byte of ROM, 64 bytes of RAM and a 97-command instruction set.

Horizon drive

A WINCHESTER disc drive for use with the North Star Horizon microcomputer is available as a standard plug-in unit from Feltham-based Intel Microsystems. For £3,000, the unit offers 25 Mbytes of mass storage for use with multi-user systems. The company also supplies the Horizon with the 6MHz version of the Z80 CPU and high speed memory.

Sharp's VX-3200 business computer, which was launched last week at Compec will be available in the UK early next year (CW, October 9). The system includes the CPU, high-resolution green display unit, dual-sided double-density floppy disc drive and an impact printer.

PHILIPS

Simply years ahead

Announcing the Philips multi-function P7000. The one that gets it all together.

You probably need more than one computer function; but you don't need more than one computer system. Not any more! Now, at a price comparable to systems performing ONE FUNCTION, the P7000 will run * data entry * local file management * transaction processing * batch processing * interactive central enquiry and update * batch communication * remote job entry plus * word processing. All this, with up to 24 workstations on a single P7000 system.

Bottom-line savings because you need fewer stations: single-function stations no longer sit idle; users cease to struggle to cross-train on dissimilar equipment; less equipment means lower maintenance costs, less office space. Optimum flexibility because computer resources keep up with changing demands—hour to hour, shift to shift, month to month; one minute word processing—the next,

taking orders and printing out invoices. Planned growth because additional terminals, memory extension modules and peripherals can be added step by step. What's more, the P7000 is installed and proven in over 30 UK sites. This is just one of a dynamic range of office machines—and all part of the wider Philips Business Systems' contribution to a whole new world of business knowledge.

I would like to know more about the P7000. Please contact me: ☐ I would also like information on the full range of Philips Business Systems equipment.

CACI London DATA ANALYSIS

A one-week course and workshop to be held on 8 December, 1980, at the Clarion Court Hotel, Maple Vale, London, W18.

This is a public presentation of the course based on six years of practical development by CACI, of techniques for the analysis and development of integrated systems and is invaluable for all analysts concerned with the top-down approach.

For further details and registration forms ring Ian MacDonald on 01-405 8233, or write to CACI, Inc. (International) at 228 High Holborn, London, WC1V 7HZ.

Well on the way to writing all of Shakespeare's plays at Compaq? These chimpanzees were on Systime's Word-11 word processing system.

Word processing bureau based on Microwriter

THE hand-held word processor with a chord keyboard, the Microwriter, has found a new use, enabling people to do typing work at home that can later be edited and printed out in an office in central London. A bureau has been set up by former Microwriter employee Bob Mussen to provide "cottage industry" typing using modern communications techniques, and he already has 25 staff working in Harrow and Dartford. The typists at home can edit the text they have produced using their own television as a screen, so the Microwriter provides word processing at a fraction of the cost of a fully-fledged machine in each home. The finished text can be

sent down the telephone, or on a cassette via messenger, to the bureau's office where it is printed out or edited again on a Tandy TRS82. The messengers also distribute the original dictation cassettes or manuscripts. The bureau, called Microwriting, will also print documents for authors who have Microwriters but do not want to go to the considerably greater expense of buying a printer. The purchase price of the hand-held unit (CW, May 11, 1968) is now £485 as opposed to the £1,700 when it was first launched, and this makes home word processing much more economically attractive than hitherto. The use of the Microwriter by

typists is a departure from the original idea, which was that authors would use it, bypassing the typist. However, Mussen finds that the WF facilities plus the fact that it takes up little space in the home make it more attractive than typewriters for this application. Training time for the typists has been, he says, between two hours and two days. The Mitcham-based Microwriter company now has over 400 units in the field at 70 different sites and has reached, in founder Cy Badfield's view, the point where it now has to expand from being a development company into a fully-fledged production and sales operation. "We know the market exists," he says. "Inquiries are escalating. The problem now is staff and capital. Investment so far has come from Hambro Life Assurance."

A stripped-down, cheaper model will probably be produced.

Swimsuit mini

SPEEDO Europe, a swimwear manufacturer and supplier based in Nottingham, has bought a Digital Equipment PDP-11/44 to deal with such applications as order entry and processing, sales ledger, cost of sales reporting and stock recording. Configuration includes a 256K PDP-11/44, twin RK 07 disc drives, plus a printer and tape drive and five VDUs.

Back-end database system

THE parent company of the Adabas database, Software AG, has announced what it calls "the first commercially practical back-end database system." The Data Base Machine is said to offer the DP community "state of the art" technology through a combination of software, hardware and support. Rather than upgrading the mainframe, the DBM approach offloads the DBMS functions from an existing mainframe to a directly attached plug-compatible machine. Software AG claims a 60% saving in CPU time, and an improvement of 25% for database performance by this method of offloading to a back-end processor.

CDC cuts cost of using Plato

CONTROL Data has substantially cut the cost of using its Plato computer-aided learning system, introducing a version that can run offline from the central computer. In announcing this, chairman William Norris predicted that educational computing would become the largest single contributor to CDC's profit by 1983.

This would represent a soaring of business in a branch of CDC's activities that is not expected to turn a profit until early 1982. At present education represents \$63 million of the computer company's total \$2.4 billion turnover. Norris feels that the large investments the company has put into Plato are now behind it and will soon start to pay off. Plato has been under development for 18 years and has absorbed \$600 million of investment.

Training

For offline working, Control Data is now providing floppy disc drives which attach to its existing intelligent terminals. Customers are expected to write their teaching programs on CDC's mainframe as now, and then down-load them onto the floppies so that training can be done without using bureau time. Students will still have to call up the bureau mainframe for testing and record keeping.

Micro-Plato, as the new service is called, is not yet available in the UK, as the US course material for the floppy discs will have to be rewritten.

Sheffield Council orders TPS

THE city of Sheffield has commissioned the TEAM TP consultancy to develop two transaction processing systems costing over £40,000, on its new ICL 2902.

The TEAM consultancy (Software File, June 26) specialises in ICL 2900 and VMS development, and has been called in to write a management system to control the repairs to Sheffield's 98,000 council dwellings. The other system is for the control and analysis of capital expenditure.

It will deal with inquiries and updates on all capital schemes within the Authority's £100 million budget. The control facilities will allow the user to predict the effect of alterations in the budget, and to refer to council minutes and decisions which affect expenditure.

The Housing Repairs System makes it possible to keep track of all repairs to council houses from the receipt of the complaint from the tenant up to the completion of the repair by the works department or an outside contractor.

The aim is to provide a better and more efficient service to tenants by improving the allocation of resources in both maintenance and modernisation.

First-time user slams Burroughs

A FRUSTRATED first-time user has hit out at Burroughs for its lack of support and guidance. He says his B80 - at the lowest end of Burroughs' small machine range - is not doing the job it was sold to do, and he can find no-one to sort out his particular problem.

Derek Randall, director of S. C. Randall, wholesale glass merchants, explained: "We bought the machine over a year ago, because we thought it would simplify the running of the company. But so far the only thing we've got up and running is the payroll."

Although he's attended several courses at Burroughs he has found none of them tailored to his needs, and has turned to an independent software house to write modules for his machine. After a long history of sorting out problems it appears to him that even now the machine can't cope with his requirements.

"We've fed up with phoning the Customer Support Centre to be told, 'Try this... ring back if it doesn't work.' It never does work," he said. "They're just fobbing us off because they can't be bothered with such a small customer. There's a feeling that they're not interested unless the customer is prepared to keep putting his hand in his pocket - and we've already paid for the system."

Unwillingness

"All it needs is for someone to come down for a couple of days and sort it out. But there's great unwillingness on their side to come down and sort out a problem that shouldn't have happened in the first place."

Burroughs recently emerged holding the wooden spoon for minicomputer support and services in the Computer Weekly Data survey (CW, October 9). The Burroughs B90 quickly superseded the B80, a dual floppy machine which proved to have too small a memory for some customers' needs.

When Computer Weekly contacted Burroughs with the complaint, a spokesman was quick to point out that the product concerned, Key BMS, was in successful use at over 600 single and over 200 multiple sites in the UK. About Ran-

dall's particular case he said: "In such instances Burroughs does not support the modified packages as the alterations are usually done under a direct contract between the user and the software house."

Over 98% of attendees at their training courses rate them as "satisfactory" or higher, he said, and Burroughs paid considerable and careful attention to training customer support. The company is about to open a custom-built training college at Milton Keynes and is currently releasing a Systems Services Plan to users which outlines in detail those areas of support to which users are entitled, and those for which they have to pay.

Cold-shouldered

This is all very worthy, but doesn't appear to help Randall very much. He feels that Burroughs' refusal to help him is cold-shouldered, and he doesn't know which way to turn.

His case illustrates some of the pitfalls into which first-time users get trapped too easily. First time round the hardware roundabout they have no choice but to accept what they are told from consultants - software, hardware, or independent. The refrain is all too often "Yes, it can be done, but it will cost you."

With a standard package like Key BMS, it is all too easy to promise non-standard "benefits" that can lead to much trouble and back-passing, since the user himself is unable to tell where the blame should lie when things go wrong. Adapting to a particular company's methods (often based on familiar manual routines) is not suited to computerised procedures can lead to dissatisfaction all round.

The entire industry is turning to the "package solution" path, and for a first-time user it would seem the most essential part of customer education is being left out: a view of the costs beyond the hardware.

Above all someone should explain, before the sale, just what software is, and how apparently trivial alterations can cost large sums. Or might it perhaps put customers off?

Dealer gets ITT franchise

DISTRIBUTOR Nortronic Associates of Nantwich, Cheshire, has signed a franchise agreement with ITT to extend the range of ITT capacitors which it handles. More emphasis has been placed on the distribution of capacitors with the taking on of a multi-layer and low voltage ceramics. Nortronic is stocking more tantalum products and commencing with tag ended aluminium electrolytics. This expanded product range is manufactured by ITT at factories in Paignon, Yarmouth, Norwich and Wrexham.

Accept the Comma challenge!

Comma Computers Ltd specialise in bringing you famous name computer products fast and at the lowest cost. Comma Computers has supplied nearly 2000 satisfied customers with a wide range of products, nationwide field service and support. All products are usually available from stock, but Comma GUARANTEE delivery within six weeks of order acceptance! Additions are continually being made to the Comma product range, so if you don't see what you are looking for, it is still worth a phone call to check on availability and price.

digital

Comma Computers have available for immediate delivery a complete range of DEC PDP 11/03 and 11/23 systems at competitive prices. RT11 and RSX11M Operating Systems and a wide range of programming languages can also be supplied. Call us if you have a requirement for any PDP Q-Bus systems.

PDP 11/03 or 11/23 based system with up to 256Kb memory and 5Mb fixed plus 5Mb removable cartridge disk
£8,790 (64Kb)

PDP 11/03 with RX02 1.02Mb floppy disks and 64Kb memory
£12,795
PDP 11/23 as above with 11/23 processor

Comma Computers manufactures a range of micro computer systems based around the PDP 11/03 and 11/23 processors and running under RT11 and RSX11M Operating Systems. These micro computers, which range from a powerful floppy disk system to a large multi-user configuration with up to 96Mb of disk storage and additional magnetic tape drives, represent substantial savings over their DEC counterparts. Systems can also be configured using the DEC VT103 LSI-11 based video terminals with a number of storage sub-systems.

All the systems available, whether manufactured by DEC or Comma, can be supplied with the MICROBOL Operating System (B.O.S.) and any of the following applications packages: Sales Ledger, Invoicing, Purchase and Nominal Ledgers, Stock Control, Payroll, Autoclerk and Auto Index. Call for full details of the Comma Robin, Hawk, Kestrel, Phoenix and Eagle Systems.

Comma Eagle
PDP 11/03 or 11/23 based system with up to 256Kb memory and up to 80Mb fixed plus 16Mb removable cartridge disk
£8,790 (64Kb) (32Mb)

DEC LA34 DECwriter IV
Desktop 132 col. 30 cps keyboard printer. 9 x 7 dot matrix. Expanded characters
£595

TELETYPE Model 43
Lightweight 30 cps 132 col. keyboard printer. Friction or pin feed
£695

DEC VT100 Video Terminal
Switchable 80/132 cols. Smooth scrolling. Detachable keyboard. Double width characters
£995

Texas Instruments 745 Portable Terminal
Portable 30 cps thermal printer with built-in acoustic coupler and separate carrying case
£1,195

COMMA'S 'MIX'N MATCH' OFFER

Comma offer you even more discount if you can forecast your next 12 months hardware requirements or budget. Even if you can't forecast your requirement, each order placed during the 12 month period qualifies for bigger discount at that time! The more you are going to buy in the future, the bigger the discount you can get right now!

COMMA COMPUTERS LTD

ELECTROSTATICS GO METRIC

with 100 dots per centimetre

We're First
Benson, world's complete engineering, bring you the first Ever Metric Electrostatic Plotter. We've designed it to conform to the European Standard Metric Unit.

We're Accurate
Our Metric models have 100 dots per centimetre which means increased density providing greater accuracy and smoother lines.

We're Versatile
The Benson Metrics come in two plotting widths, the 648 accommodates a full A1 size drawing and the 843 a complete A0. They can also be used as printers and hard copy devices.

We're Ahead
We've used our revolutionary "C" technology featuring the "Quadracore" writing head and unique spring and dyeing system giving superior black and white results.

We're Helpful
We're a nationwide team of sales, software and engineering specialists dedicated to providing the best possible pre and post-sales service. We have a list to tell you about Benson Technology - write or telephone now.

COMPANY NEWS

DP firms join unlisted market

THE long-heralded unlisted securities market was launched at the London Stock Exchange on Monday with computer services bureau Scan Data International and United Electric Holdings among the first 11 companies listed.

The aim of the market is to encourage high technology companies which might not qualify for a full listing to come to the market for funds.

"The exchange intends to open a market to developing companies," said its chairman, Nicholas Goodison, "with a minimum degree of regulation to protect the investor. Companies quoted in this market will have their shares listed in an annex to the Stock Exchange listing and will be allowed to place as little as 10% of their shares for purchase by the public." The Stock Exchange will charge £1,000 a year to a company offering its shares to the public through the market. There is no

initial charge for coming on to the market and no requirement for an accountant's report.

There is no bottom limit on the size of company, Goodison added, although it will normally be required to show a three-year trading record with accounts to back it up.

Pressure

There is now pressure on other computer companies to follow the lead of Scan Data (based at Haywards Heath, Surrey) and United Electric. They include Cheshire based services bureau NAW which, ironically, specialises in services to stockbrokers.

It is currently listed under Rule 163(2), an interim measure which allows trading in the shares of companies not listed on the exchange. It does, however, require the Stock Exchange authorities to approve each deal struck.

The advantage of going public on the unlisted market is illustrated by the funds which Scan Data hopes to raise. It started the week offering to sell 400,000 shares at £1.25 (10p at par) to raise £50.5 million. In fact the shares were trading at 185p at the end of the first day. This will cost about £68,000, which includes the Stock Exchange's fee, brokers' and bankers' commissions, and an announcement in the Financial Times.

The alternative is to pay about £100,000 a year at current interest rates to borrow from the banks. Scan Data managing director Martin Baldwin stands to gain £125,000 before tax by selling 100,000 of his own shares as part of the company's offering.

The company made a pre-tax profit of £162,000 on a turnover of £1.85 million in the year ended November 30, 1979.

Query hangs over C & W future

CABLE and Wireless results for its 1980 financial year, ended March 31, show a small drop in pre-tax profits but a healthy increase in turnover compared with the previous year. It rose 23.4% to £255 million.

Pre-tax profits fell from £45.5 million in 1979 to £43.5 million in 1980, but, in his last message as Cable and Wireless chairman, Lord Glenamara (former Labour MP Edward Short) warned that the pursuit of profit could never be the sole motivation of the company despite the fact that it might be on the threshold of a partial return to private ownership.

The main business of C & W is operating public telecommunications services in 31 countries and territories, but the company is becoming increasingly active in this country with its maintenance services and minicomputer systems business. It also hopes to take advantage of the relaxation in the British Telecom monopoly (C/W, August 14).

ACT to go public

APPLIED Computer Techniques, the Birmingham-based computer services group, is set to join the select group of UK computer companies with a full listing on the UK Stock Exchange.

Last year ACT shares became

listed under Stock Exchange Rule 163(2), now being replaced by the unlisted securities market.

Since then they have risen in value from the launch price of 95p to 475p.

For its financial year ended March 31, ACT recorded a net profit of £502,798, 157% up on the year before, while its turnover rose by a highly impressive 79% to £5,568,285.

UCSL Micro snaps up PoS firm

UCSL Microsystems has extended its range with the takeover of Fieth Ltd, a Manchester-based manufacturer of point-of-sale equipment which ceased trading last month.

According to UCSL Microsystems MD Bob Gilkes, the closure at Fieth, which will now continue to produce point-of-sale equipment under its own name, came at an opportune time for his company.

He said: "The opportunity to acquire this product matched very well with our established plans to extend our markets into precisely those areas and users defined by Fieth. The new equipment and Fieth staff we have employed will enable us to implement our plans earlier than expected."

Electrical giant takes over Dicoll

DICOLL Electronics, the Basingstoke-based systems house specialising in educational and industrial systems, has been taken over by Forward Technology Industries, a public company's electrical engineering subsidiary in France, UK and West Germany.

The 63.7% acquisition amounts to £701,760, and an additional £62,000 may be payable, based on the profits of 1981.

Dicoll Electronics was set up by the present managing director, Brian Collier, about 10 years ago and has since specialised in R&D, design and production of computer systems and colour graphics.

For the last three years growth has averaged almost 100% a year with a turnover this year expected to be about £2½ million.

The takeover represents Forward Technology Industries' first move into the computer industry. The company had a turnover of £44.5 million in the year ending June 1980.

Dicoll used last week's Compu exhibition to launch a number of new products including a Winchester disc based LSI-11/23 computer system with 256K bytes of RAM memory.

More dealers

The computer division of BASF has appointed three more dealers for its microprocessor based 700 Series small business systems. These are Computer Services, Canterbury; Verles Marise Computers of Erdington, Birmingham; and Davies Brown of Shoreham, West Sussex.

£780 m sales

TEXAS Instruments achieved over £780 million sales for the half of its financial year. The figure for last year was £1,300 million.

Light-beam technique may make possible self-generating machines

by Rory Johnston

A REVOLUTIONARY technique for using beams of light to interconnect very large numbers of processors in an array is being devised by researchers at GEC Marconi's research labs.

It is hoped that the resulting increased flexibility and reliability will lead to a new generation of self-configuring array processors, and possibly even machines that can reproduce themselves.

The idea came from Bernard de Neumann, a mathematician at Marconi who is trying to overcome the "von Neumann bottleneck" inherent in the computer architecture invented by his distant cousin John.

Existing array processors are limited by the fixed interconnections between the components, de Neumann feels, and he would like to see arrays with 10³ or 10⁶ processors with "dynamically changing interconnection paths" using his new technology.

Mirrors

De Neumann envisages each processor being made on a single chip, incorporating a light-emitting diode and a photodiode on each. The processors would be mounted around the inside walls of a chamber, positioned so that every one is in line of sight with every other one. Mirrors might be used to assist this.

Transmission from the different processors would be multiplexed, either by frequency division or

time division, synchronisation coming from a central light. Power could even be supplied through a single light source feeding photocells on each chip.

This arrangement eliminates all the connections that normally have to be made to chips and that are the commonest source of faults in conventional computers. It also enables any processor to communicate with any other processor, unlike ordinary arrays in which each processor can talk only to its four neighbours.

Fault-tolerant

The De Neumann design can therefore act like a conventional array, or a pipeline array, or a tree structure as is used for searching. It would also be fault-tolerant. Scientific work such as solving large sets of partial differential equations is the sort of task de Neumann has in mind for the machine, but it would be adaptable to a very wide range of purposes.

No hardware has yet been built in the Marconi project, but some breadboard work should be started soon. Real benefit from the idea will have to wait for implementation in VLSI, de Neumann points out. There is also a lot of work to be done on computation complexity theory, as current theory is largely in terms of conventional Turing machines.

Architecture work now being done consists largely of identifying

what the chips should consist of and what the optimal store sizes and data rates are.

Excited

The theory of self-reproducing automata shows that such an automaton could be built were it possible to incorporate in it 200,000 processors. Since this is within de Neumann's target, he is excited at the possibility of building such a machine. Connecting the array processor to a "universal construction machine," with sensors and manipulators, would lead to a machine that could literally reproduce itself.

It would need plenty of hardware to find and process materials, such as mass spectrometers, but it is something that futurologists have been seriously envisaging.

It has been predicted that a universal construction machine could exist within 100 years.

Tory TUs criticise govt

THE government has been severely criticised by its own trade union supporters for failing to subsidise and promote adequately the UK information processing and communications industries.

A motion to this effect, put by two managers at ICL who are members of ASTMS, was passed by a two-thirds majority of the 1,600 delegates at the Conservative Trades Unionists Conference at Reading.

Martin Roberts, the proposer, described as "unbelievable" the government's "dithering over providing support for ICLs while it was providing substantial aid to Nippon Electric to set up a plant in Scotland.

Roberts pointed out that at the 1979 conference he had said it was too soon after the election to criticise the government for lack of action, whereas now, a year later, the government had in fact done "very little". He called for preferment for indigenous suppliers, and larger development subsidies.

Equality at CMG

BY treating its employees equally, being open about staff salary levels, promoting from within and running an "Internal" stock exchange, CMG Computer Management Group (Scotland) has won the Confederation of British Industry's 1980 Award for Employee Involvement.

At the Glasgow-based company more than 300 employees, about 60% of the staff, take part in an annual "Stock Exchange" where they buy and sell their shares in the company.

From staff to director levels everyone at CMG knows what everyone else earns. They share the same type of furniture in open-plan offices, and no one

pulls rank in the car park or anywhere else.

Women have just as good a chance of climbing the promotional ladder there as do CMG's male employees. A former part-time secretary - who started with the company after her children had grown up - is now a CMG director.

CMG Scotland is a subsidiary of the CMG Group, formed in 1985 to provide a service covering consultancy systems and software work, and information processing.

Argus700 Series 2.

Multipower multispeed multichoice multiprocessor.

Flexibility

Argus 700 Series 2 is based on new versions of the Argus 700F and G central processors which can be used individually or in closely coupled groups supported by a multiprocessor operating system. In its various configurations it's a package designed to meet the needs of almost all control, communications and information handling applications. A cost effective system, competitively priced.

The Faster Way

Texas Instruments are making it easier than ever for you to see, try, and buy the widest range of reliable printers you're likely to come across. Now there are seven Authorised Distributors with 18 offices to offer personal, close-at-hand service to computer users throughout the U.K.

PEOPLE and EVENTS

£1,000 for best buyer of the bunch

A SENIOR buyer for CDC has beaten more than 40 of his fellow professionals to a £1,000 prize and specially designed trophy in an annual competition. It was sponsored by a company specialising in stainless steel and aluminium stockholding and stainless steel engineering.

Lindsay Hackett was judged best of the bunch in the Ravensdown Buyer of the Year 1980 competition by a team of adjudicators including Bryan Duffield, managing director of the Ravensdown Group and Alan Robertson, head of the Institute of Purchasing and Supply Training Committee.

The win comes at just the right time for 24-year-old Hackett, as he gets married in two weeks. He said, "I'm very surprised and very honoured. Competitions such as this can only be good for the purchasing profession."

Like the other competitors, Hackett, who has a degree in economics, had to submit written entries on subjects related to purchasing. He was also interviewed about his profession by the judges.

Presenting Lindsay with the trophy, Frank Holloway, managing director of finance and supplies for British Steel, described purchasing as a "Cinderella profession" and stressed that the buying function represents between 50 and 60% of a company's total costs.

Lindsay Hackett, overall winner of the Ravensdown Buyer of the Year Award, receiving his cheque from Frank Holloway of British Steel.

New offices for two companies

A PERIPHERAL Products Division has been set up by PRCI (UK) in Barrow House, Goldsmith Street, Nottingham. Telephone (0602) 415155.

The new division will handle a range of peripheral, terminal and ancillary products. Sales manager is Colin Zardin, formerly of Centronics.

Mascom Systems Ltd, which has its headquarters in Luton, has branched out to London with the establishment of a new sales office in Connaught Place, W2. Telephone 01-724 2638.

Jeff Lewis will head the office as sales manager.

Maurice Garner has been appointed to the board of Microlec. He is a Fellow of the Institute of Chartered Accountants and has been in petrol retailing for 18 years.

Jeffrey Pitteway has joined Recognition Equipment Ltd as marketing manager for its range of OCR data entry systems. He formerly held positions with Management Sciences of America and Univac (Canada).

Ray Weston has joined GST Computer Systems as principal consultant in industrial computer application. He was formerly a managing consultant

with the Industrial Division of IAL Gemini.

Don Philip has been appointed marketing consultant at GEC Minicomputer Systems in the Birmingham office. Prior to this appointment he was with Thornton Baker Associates.

Richard Ackroyd has been appointed European sales manager at Isovel International. He was formerly with Denco Miller, where he worked as air conditioning export sales manager.

Tom Busby is the new company secretary at Computer Automation. He has previously held positions with ITI, Pye and, most recently, Borg-Warner, where he was controller and divisional director of the company's Transmission Division.

Robert Ford has been appointed manager of the Private Communications Division, at ITT Business Systems. He joined the company in 1962 and worked most recently as technical and planning manager.

John Flynn has been appointed marketing director of H&T Components. He is a member of the Institute of Marketing, and joins H&T from RCA Security Systems, where he was marketing manager.

Ray Darker has joined Lion Microcomputers as sales executive.

Institute of Marketing names six vice-presidents

THE Institute of Marketing has appointed six new vice-presidents, two of whom are from the computer-related industries.

Sir Kenneth Corfield, chairman of Standard Telephone and Cables, and Edward Nisum, chairman of IBM, will sit on the Institute's newly established President's Advisory Committee for two years. The main purpose of the committee is to create a high level of consultation, discussion and influence within the structure of the Institute.

Other appointments are Sir Montague Fiansting, former chairman of British Steel; Sir John Greenborough, immediate past president of the CIM; Ronald Halstead, chairman and managing director of Becham Products; and Patrick Neary, managing director and chief executive of Thomas Tilling.

Denis Prater has been appointed computer manager at BP Chemicals in Antwerp. He joined the company in 1951, and takes up the new post in Belgium after spending 10 years as manager of BP Chemicals Western Region at Buglaw Bay in South Wales.

Derek Hipkin is Panasonic Business Equipment's first software manager. He was formerly a senior analyst/programmer, working on the development of software packages.

Paul Cokerham has left his position as managing director of Hardons to become managing director at Alpha Microsystems. Ianworth Evans has joined the company as sales director, having previously spent three years as commercial director of Woods of Colchester, a GEC company.

Liveware File

IBM introduces new ways to improve office productivity.

Sometimes it seems that there just aren't enough seconds in the day to get all your work done.

In an age where technology can move information at electronic speeds, it can still take days to get a finished document into the hands of the people who need it.

But now IBM introduces a wide range of major new office systems and programs.

No matter what your business—no matter what its size—these new offerings can help improve your business productivity.

EFFICIENCY FOR TODAY—MODULARITY FOR GROWTH TOMORROW—THE IBM DISPLAYWRITER.

This may be the easiest word processing system that you've ever used.

The new IBM Displaywriter can show you how to process words, just follow the instructions on its screen, which guide you, step-by-step, in creating, revising and editing documents.

It can even check your spelling at up to a 1,000 words a minute using its electronic dictionary of 80,000 words.

With the communications options, you'll be able to send or receive information from other communicating IBM office products, and suitably programmed computers.

And because the IBM Displaywriter is modular, it's flexible. As your company grows in size, your Displaywriter system can also grow in size and capability.

So you only buy as much as you need. You may want to design your system initially for one person, then graduate to two or three—by adding more display screens and keyboards, and later perhaps faster printers. Or start with basic word processing and add more software programs as your needs grow. This is why it can be more efficient and more economical.

And although a major design concept was ease of operation, perhaps the easiest thing about it, is its price. Would you believe from £4,878* plus software?

combination of names and lists—and the 8520 gives confirmation of delivery.

It's easier than you think. For example, special instructions appear on the screen in plain English when help is requested and you can control many different functions from one work station.

In fact, the 8520 can do several things at the same time. As well as the communications activities, many of the traditional word processing revision and pagination functions can, if desired, be carried out by the system automatically, thus leaving the secretary free to undertake other tasks.

The IBM 8520 is an integrated system supporting multiple work stations, all sharing the same information and facilities.

And the 8520 can form part of a network exchanging information and documents with other 8520's, suitably programmed System/370 computers as well as the new Displaywriter.

THE NEW DISTRIBUTED OFFICE SYSTEM—FOR PROFESSIONAL BUSINESS PEOPLE.

The IBM Distributed Office System boosts productivity in text and data handling by bringing the function and power of central computers to the fingertips of your secretarial, administrative, and professional staff.

This new system comprises software for the IBM 8000 Information System and a compatible host computer. Like the IBM 3730 Distributed Office.

To find out more, post the coupon or ring Valerie Lindell on Basingstoke (0256) 88144.

MEETING CUSTOMER NEEDS.

At IBM we've always believed that we should offer a variety of solutions to meet the broad spectrum of our customers' needs.

The IBM Displaywriter, the 8520 and the IBM Distributed Office System are our newest products designed for different word processing requirements.

To find out more, post the coupon or ring Valerie Lindell on Basingstoke (0256) 88144.

THE NEW IBM 8520 combines many office administration activities with electronic document distribution.

Word Processing—from the same visual display unit secretaries can create, edit, revise, sort, process and handle normal correspondence, as well as handle business information.

File Processing—with the 8520 you can add, subtract, multiply, divide and compare numeric information within files. It can also perform multi-step tasks with just one instruction.

Electronic Document Distribution—documents can be transmitted in minutes to a single person, to a distribution list, or a

DESIGNED FOR THE FAST FLOW OF INFORMATION—THE IBM 8520 ADMINISTRATIVE SYSTEM.

Communications System on which it is based, it provides word processing capabilities, administrative functions, integrates text and data applications, and caters for information retrieval and the distribution of documents over telecommunication networks. It also makes publications production possible at your central computer.

By providing extensive text and data processing functions the system can handle both secretarial and administrative tasks in a manner that allows integration with the business communications needs of professionals and managers.

Key elements of the new system are pre-packaged, pre-tested, and ready to install.

The new Distributed Office System brings powerful computing to company-wide business communications.

MEETING CUSTOMER NEEDS.

BP Channelling raw materials into usable products

Part 2 of our series examining the role of computing in a multinational.

HUNDREDS of BP companies are active throughout the world in operations ranging from basic research to exploration, production, refining, and marketing. The channelling of natural resources such as oil, minerals, coal and metals into products for the market — whether energy-based (ie petrol, coal and natural gas), chemical derivatives of these (such as ethylene), or consumer products — involves thousands of operations and processes.

In recent years there has been a significant growth in the use of computer based scientific and technological disciplines at every level throughout the BP chain. We have selected just a few examples from each area of activity.

During our research into BP,

one of the interesting points we have discovered is the high degree of involvement of researchers and engineers in various disciplines — such as geophysics and chemistry — who are involved in specifying and developing their own computer systems. Various aids for the development of systems are being made available in BP.

One example is the Unix operating system. BP is about to become one of the first commercial organisations to use this system as a PWB (programmer's work-bench). Two systems are to be installed, one by BP Trading and another at the Research Centre. BP sees the use of such systems as particularly important, certainly in the scientific areas, where the many graduates that the company employs each

year, from a variety of backgrounds, now take for granted that such computer facilities will be available.

The PWB/Unix system will run on PDP-11/70s and will be used principally for program development. It will also provide text editing and electronic mail facilities. An important feature of the system is the capability to provide convenient RJE and asynchronous links to other computers.

Powerful

BP Research Centre's Unix System, which will be used for Fortran program development, is going live this month (November) and will initially use 20 Perkin Elmer (PE) terminals. The Unix

software is being obtained from Interactive System Corp (ISC) in the US. ISC has modified the PE terminal to produce a device that has a powerful program development station and yet also incorporates flexible word processing features.

The BP Trading Unix System will also use ISC software but will have 40 Digital Equipment VT 100 terminals, again modified. This system will be used for both Fortran and Cobol program development.

A source code control system will also enable a number of users to develop large systems interactively between them, on their individual terminals, without any confusion between users.

The Research Centre makes

A scanning transmission electron microscope used in the elemental analysis of protective coatings for steels at BP's research centre.

extensive use of micro and mini-based systems in such applications as engine test beds, real time fuel consumption analyses, and monitoring of energy and heat conservation in experimental low energy houses (in this experiment, temperature comparisons are analysed on an Apple II).

One project, for example, will link eight different pilot plants for the testing of new catalysts, new processes, etc. This will be an on-line, continuous process, distributed network based on small satellite minis each dedicated to a particular plant. Each satellite mini will handle 30 to 40 control loops and be linked into a PDP-11 used for overall system control and monitoring and for switching data into Univac mainframes to handle complex analyses. This completely automated system is expected to make a significant contribution to improving existing refining processes and in developing new processes.

The fruits of such computer-based research eventually find themselves in practical use in the many BP companies involved in exploration, production and refining. Computer techniques are now being used, for example, in data analysis of seismic surveys. Micros are used for data gathering which is then processed on BP's large Univac 1100s.

Such logging systems, covering exploration for oil, gas and coal etc, involve large volumes of physical measurements from exploratory bore holes and oil producing wells, and these need to be translated from magnetic tapes produced by the logging systems. Information from the North Sea and other exploration regions is stored on a database, and can be accessed online, enabling engineers to study individual wells or complete oilfields.

● Turn to page 17

Control room in main operations control at BP/Sohio operations centre, Prudhoe Bay, Alaska.

BP Blending model

From page 16

this, Scicon developed for BP a process supervisory and control system, which is operated from the main centre in Alaska. A microwave communications system is used for data gathering, the information being stored on a database.

The system is based on two Honeywell process control HS4400 computers. Four thousand remote analogue and digital points at each of the gathering centres are regularly scanned, updating the database online. The system, which has interactive display facilities, also allows automatic scheduling and control of oil well flow production rate, with verification against the planned characteristics of each well.

Environmental conditions have also posed problems in North Sea oil development and it has proved necessary to create simulation models for North Sea supply. The models, which are available to outside users, contain all the possible variables matched against detailed records taken from operations over, say, the previous six months.

Outputs from the many real time or process systems that capture, analyse and produce information from areas such as the North Sea, are utilised centrally by BP Trading for oil production accounting systems. Information on reporting and the recording of hydrocarbon movements, as well as analysis data from terminals, pipelines, platforms and refineries, is validated and stored on disc for later use. Provision (a form) is carried out against measurements from other areas.

other computer systems. Up to 150 requests a day are issued to the report generator program which enables users to specify a variety of criteria for data. A high degree of automation and process control is involved in the refining of crude oil into petrol, oil related products, or chemicals. Mathematical programming techniques are used in areas such as vibration analysis and heat transfer calculations on heat exchangers. Complete mathematical modelling of refineries is a widely used technique within BP, enabling production plans for new plants and refining processes to be designed. The optimum combination of operational capabilities, product demand, availability of feed stock (crude oil, etc), can be determined before any change in refinery production process is considered.

Blended

BP Trading's processing department is constantly involved in the development of specific models and process techniques. For example, it has developed an on-line linear programmed interactive blending model that can be used to maintain a multi-component line blend within the specified limits of several parameters. For example, a fuel oil can be blended to maintain its sulphur and viscosity specifications.

Advance scheduling systems are also now being developed by the refineries department in conjunction with Scicon. The first of these, due for installation early next year at BP Oil's Kent refinery, will run on a Digital Equipment VAX and will use a BP-developed command language which enables non-computer users such as refinery schedulers and chemical engineers to control the program and impose their own rules for the selection of any simulation. In this respect, the only restrictions placed on the user are those assumptions which result from the natural laws of chemistry, physics or chemical engineering in the context of refinery operations.

Maintenance departments in refineries also have a need for comparison and utilisation of volumes of data in different formats and from different sources. To assist the maintenance operations in their oil refineries, BP has developed an online maintenance and reliability tracking system known as Smart. Based on a Hewlett-Packard 3000/33, the system utilises VDUs in various parts of a refinery site with printers where necessary. The first Smart system is being implemented at BP Canada's Trefalgar Refinery near Toronto.

BP Chemicals has also developed an online maintenance system especially tailored for chemical production. The BPAC (Engineering Planning And Control) system is being implemented on the ICL 2903 in South Wales. It keeps records of parts and of maintenance scheduling,

historical records of parts failures, etc and can be accessed by maintenance engineering staff through VDUs at a number of locations around the chemical processing plant.

Parts records input to the system are quite substantial. BP Chemicals has so far put some 20,000 records on to the database using in excess of 42 megabytes. The total number of items is expected to rise to over 50,000, some 10,000 of which will be regularly accessed.

Mathematical modelling is also used for refinery production planning. BP Chemical's POMP (Production Operations Management Program) is a system which utilises co-ordinated data from all factory sites as well as head office. POMP enables calculation of potential plant requirements to be made, with forward estimates for up to 18 months. The system aims to minimise costs, subject to company strategies on, for example, stock holding, and it enables both production and commercial staff to view alternatives based on "what if?" questions.

Scans

At BP Chemical's Baglan Bay operation three manufacturing plants each use a Ferranti Argus system for data collection from various processes within each plant. Fifteen-second scans are integrated every hour so that temperature and pressure flows, etc can be compensated. A fourth Argus is used to access and consolidate this information three times a day, and to provide average production data for daily logging onto disc on an ICL 2972, which then writes the information to a history file.

The various processes and their efficiency are reconciled by comparing the raw data as logged against a model of the process involved. A reconciliation for each process is carried out via the Argus system and further consolidated against a model run on the ICL 2972 to produce a reconciliation for the entire processing site. The resultant output provides the input data for systems such as POMP.

Technical and scientific computing in BP involves many more applications than we have room to describe. These include, for example, a Rair Black Box microprocessor system used to track BP Chemical's acetyl acids stock levels and distribution throughout Europe.

Yet another system is a 30-terminal transaction procurement system run on BP's Univac 1100/21 which uses Wang word processors to produce orders and to access the system for financial data. Over 5,500 online accesses are made to the procurement database each day.

Hundreds of similar applications exist throughout BP, and next week we will describe a few used for accounting purposes.

BP Trading's MDF system performs broad strategic planning and the day-to-day control of shipping movements as well as providing daily management information.

B4, 61A moves F3, 1VED

...or if you haven't got a pocket edition of the Geographical A to Z of London with you: Dorset moves to Quadrant House in Suffolk, Street, SE.1.

This is the new headquarters of our parent, IPC Business Press — and our new address from 1st December.

It's a brand-new, purpose-built block of twenty stories to a low-rise block of seven situated right by the station. The environment the facilities are improved, the telephone system is modern in the or will receive your answering service.

This is or hope our simple Dorset.

We're also seeing or hear you at our new address, so please make a note in your diary now.

COMPUTER WEEKLY moves on 10 November 1980 to Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS. Tel: 01-661 3500 Telex: Bisprsg 892084

Defining what the business does

by Rosemary Rock-Evans

Section I — Part 7

of our series describing a system design methodology

IN the previous parts of this series, we have concentrated on entity analysis, and the way in which the entity types a business is interested in can be defined and their relationships modelled, using an entity model.

The following two parts will introduce aspects of functional analysis, the activity carried out in parallel with entity analysis, which defines what the business does.

Functional analysis has many purposes, which will be explained in detail in later articles. Briefly, however, the main uses are:

- To find out the business activities a system or systems must support and hence what applications will be required.
- To refine the entity model.
- To design the database, as functional analysis provides quantifiable information on the way in which the data in the database will be used.
- To provide the basis for designing transactions.

There are two concepts used in functional analysis, those of a function and an event.

Functions

A function is a business activity. It is what the enterprise does in order to operate, for example, it pays people, handles orders, deals with enquiries, controls lending, and so on.

But strictly speaking these are functional types, a function occurrence or execution being the payment of a specific person, the handling of a specific order, etc. A function type is not defined in terms of who performs the function — the same function type can be performed, quite legitimately, by a number of people, possibly for different purposes.

Nor is it defined in terms of how its inputs and outputs have been implemented, eg, Use form XY22 and fill it in; nor is it defined in terms of machines, eg, Use a pocket calculator to calculate interest. A function states what is done and refers only to entity types, entity sub-types and attribute types. (How the function is carried out is decided later during the design stage.)

Thus the three basic rules when determining the defining functions are:

- 1) Never mention people or jobs.
- 2) Never mention forms, output reports or other procedural things: only refer to entity types or entity sub-types, attribute types or values.
- 3) Never mention machines, such as computers, typewriters, etc, which are involved in the implementation of the function.

Several aspects of functions are worth noting:

- 1) Each function is an action upon something, expressed in terms of a simple declarative statement which

consists of a verb and an object, eg, calculate (verb) interest on a loan (object).

2) Every function must involve the transformation of some "input" to some "output" and functions are related by their output and input — one function may produce output which is another function's input. Both output and input will be entity types, attribute types, relationship types and values and we shall see in later articles that many functions result in a change of state of an entity.

Implication

In Figure 1 the "input" and "output" of some example functions is shown. Notice that some functions have multiple inputs. Notice also the example where the "Packed Labelled Goods" output is part of the input for the "Deliver Goods" function. The implication of these features will become apparent when functional decomposition and data flow diagrams are discussed in later articles.

3) It is important to emphasise that no distinction is made between functions which are physical tasks, clerical functions, and managerial functions, such as decisions. We are studying the business and how it operates, not just the tasks we may think could be computerised.

The knowledge of the existence of a physical or decision task, for

instance, is as useful during the design of a system as knowledge of the existence of a clerical task, simply because it helps the analyst to understand the dependencies between functions and hence how the business as a whole operates. This is particularly important during transaction design as the initiation of the transaction may be dependent upon the completion of a physical or decision task.

4) Functions may exist which are not executed for every occurrence of their object entities. Such function types are termed optional and the conditions under which they will be executed must be documented. For example the function "Cancel Patient's Appointments" will be executed only if the patient has appointments.

Optional functions depend upon the values of attributes and/or the participation in relationships of their object entities. The use of the word "may" with the verb and/or a condition clause usually indicates that there is optionality, so that the function above would be better described as "May Cancel Patient's Appointments if any exist".

5) In many cases any one of a group of functions may be executed, but not more than one. These are termed exclusive function types. Again the condition determining the function's selection for execution must be documented. For example, the functions "Handle Patient's Death if In-Patient" and "Handle Patient's Death if Out-Patient" are mutually exclusive. We shall see later in the series that exclusive function types often have entity sub-types as their objects.

An event is the stimulus or trigger which initiates one or more functions. Every function is trig-

gered by an event, even if it is only the simple event of the preceding function having been completed.

Events are of interest because:

- They are used in determining the transactions required in the system.
- They help to identify the functions of the enterprise.

The events in which we are particularly interested for transaction design purposes are the events which start or initiate a chain of functions. Those events which simply mark the expected completion of one function and hence the start of the next, are of less interest.

In Figure 2 some examples are given of initiating events. Events are either:

- 1) External to the area under study, ie not generated by the business operations of the particular part of the business being studied, OR
- 2) Internal to the area, ie generated by the business activities under study, and dependent upon situations fully relevant to that part of the business. These situations are likely to be the success or otherwise of a previous function, a managerial decision, or a specific time being reached, eg month end.

The relationship between functions and events is quite complex. An event can initiate more than one function, but in turn a function can be initiated by more than one event. But exploring this relationship can help the analyst to decide where functions are missing and which events can be grouped to form transactions.

Determination of events and functions

Simply because function types describe what the business does, the best person to determine the function types of a business is the user in conjunction with the analyst. This is no different from the way in which a systems analyst would normally complete the "user requirements" stage of a system, except that the framework provided by functional analysis provides a better tool with which to analyse the results of interviews, and the existing documentation and procedures. Another article in the series will be dealing with functional decomposition, which describes how the function types are documented and broken down as more is known from the user. It may be of interest to know that in some cases users, with tuition, have performed functional analysis without assistance.

The following points may help in determining what the function types of an enterprise are:

- Function types and the organisation of a business are not the

same. It is dangerous to assume that the jobs and divisions in an organisation can be used as a basis for functional analysis. One of the uses of functional analysis is to show where the organisation and functions of an enterprise are different, or even in conflict, to indicate where rationalisation might help the business.

Tangible

● If a procedure manual for an area under study is available, it will often specify many of the functions which are completed in the area. These are usually found within the description as "verb" describing things that are done.

● Functions sometimes produce tangible "end-products". It is therefore often useful to understand what the end-products of each function type in the area under study are. "End-product" should not be confused with reports or documents presently being produced, as these may be the results of inadequate system.

"End-product" simply means the known necessary outputs of the overall function e.g. the contents of a payslip, P45, P60 etc. for the "pay people" function; a priced, validated and edited order as a result of the "handle order" function.

● Since events are the trigger functions, the events should be used as a prompt for the user, to make sure all the functions have been covered.

In order to determine events the following questions can be used:

- Which events can cause an entity to "die" or become of a further importance to the enterprise?
- Which events cause an entity to be "born"?
- Which events cause a change in the values of each attribute of an entity?
- Which events cause a change in the relationship between entities, ie establish the relationships or break them?

It is also useful to bear in mind the following points when considering events:

- Inquiries and decisions are events.
- Events can be regular — month end, or irregular — person admitted to hospital.
- Events can be predictable — operation completed, or unpredictable — person dies.
- Events can be normal — patient arrives for an appointment, or exceptional — patient fails to attend appointment. The regular predictable events are usually the easiest to determine, because the user deals with them the most frequently. It is the unpredictable and exceptional which require more intensive study by the analyst to discover.

In this article the two concepts of the event, or trigger, and the functions, or activities, have been introduced. In the next part of the series we will go back to entity analysis and introduce the new concept of attribute types which may be dependent on functions.

The Data Analysis methodology was developed at GACI by the

Palmer.

Appointments

THE NEWSPAPER COMPUTER PEOPLE RELY ON

Appointments

IBM SYSTEMS PROGRAMMERS WANTED IN STEVENAGE AT SALARIES UP TO £9500 p.a.

- New IBM installation
- Range of opportunities
- Good external training
- Excellent relocation package

Our client is a member of a substantial group operating at the sharp end of technology.

Staff turnover is low but new opportunities have been created by the installation next month of a big IBM mainframe.

We would like to meet experienced Systems Programmers with a minimum of 12 months IBM, MVS operating system. You will be in at the start in an installation with a lot of computing experience but just introducing IBM hardware for the first time.

Of course there will be problems so you should have a keen problem solving capability. And you need to pass on your advice and enthusiasm to programmers and technical users who are not fully familiar with IBM hardware and software.

These are first class opportunities carrying competitive salaries, a high level of external training and the excitement of working in a space-age environment. The company offers a number of benefits including a really worthwhile relocation package in appropriate cases.

We have more information on the company, its products and career opportunities. Please call Mary Stone for the facts. She will be pleased to hear from you.

Real-time Systems Professionals

Central London Bank £9,000-£13,000 upwards

Our client, an INTERNATIONAL BANKING concern, requires high-calibre PROFESSIONALS in order to develop advanced online international Banking Systems.

The Systems' Architecture, as outlined

- ★ Will run under RSX11 - M.
- ★ Involves a Real Time Interactive TP Network
- ★ Interfaces with foreign Banking networks

It is essential that candidates have a thorough knowledge of REAL TIME INTERACTIVE SYSTEMS DESIGN. However, preference will be given to those who possess experience in a number of the following:

- ★ RSX11 - M
- ★ FORTRAN
- ★ MACRO - 11
- ★ BANKING
- ★ BASIC + 2
- ★ MANAGEMENT POTENTIAL

For those with potential, a very impressive career progression is available

Additional Benefits include:

- ★ Heavily subsidised Mortgage
- ★ Non-contributory Pension
- ★ Guaranteed Bonus

Giving a package value of £17,000+

Systems Consultants

PACKAGE
£10k-£16k
PLUS CAR

W.Germany
and the U.K.

... to advise on and implement the most appropriate and cost effective hardware and software solutions within manufacturing organisations.

The outstanding success of our UK Company and subsequent expansion into the international market place is a direct result of investment in both high calibre personnel and the provision of a service unequalled in the consultancy sector. When you are in competition, as we are, only the best is good enough - our Company puts to the test the skill, team work and creativity of "top flight" professionals, combining a high degree of technical expertise with a thorough understanding of business practice, particularly the special needs of the first time user.

Essential requirements for these positions are a sound systems background, considerable exposure to manufacturing applications, a totally professional attitude conducive to the sales support function, preferably experience of mihi computers, and for the overseas position, fluency in German.

Candidates will be based in the UK or Germany but preference will be given to German nationals or applicants who will permanently relocate to Wiesbaden - a short distance from Frankfurt and in the heart of the Rhine Valley.

As in any industry, talent cannot survive and skills develop without challenge, competition, and opportunity. Our Company can provide a dynamic and growing environment, through which to realise your potential - the inherent career progression is obvious.

To discuss these opportunities further, contact, in confidence, our Advising Consultant, Sheila Bradbury on 061-833 0427 or 0625 523823 (Evenings & Weekends).

London 01-836 0871 3 Mandeville Place, Wigmore Street, London W1M 5LB

Specialist Computer Recruitment Ltd.

MYRIAD SYSTEMS ANALYSTS - SECURE YOUR FUTURE

The City

Salary circa £10,000

Our client, based in the City, operates one of the largest on-line terminal networks in the U.K. and Europe, which provides a valuable financial and business information service to many major institutions including stockbrokers, pension funds, insurance companies and banks. To ensure the continuing and successful development of a wide range of on-line and interactive systems the company is now seeking to recruit additional Systems Analysts.

The installation comprises an Amdahl 470/V5 with MVS and TSO/SPE, soon to be upgraded to a V6 and there are at present more than 350 terminals in operation. This is an opportunity to play a major part in the development of extensive real-time financial systems in a professional and stimulating computer department where career prospects are first-class, with the company affording every encouragement to persons wishing to advance into a more senior role.

If you like problem solving, plenty of user contact, taking systems from feasibility to implementation and beyond, and can offer relevant systems analysis experience in an IBM or IBM compatible mainframe environment, the ability to work on one's own as well as in a team, and possibly some low-level programming experience, then contact us now and secure your future.

Company benefits include a high starting salary, non-contributory pension, free life assurance, health insurance scheme, LVs and an interest-free season ticket loan.

SYSTEMS ANALYSTS

WEST LONDON

TO £10K
+ BENEFITS

IBM 4300
NEW SYSTEMS DEVELOPMENT

Only very occasionally does an opportunity arise to join a data processing department which is moving into new areas of its company's business to provide a professional and effective information service.

The successful and expanding business of our client offers such an opportunity for an ambitious commercially-minded analyst to play a key part in the development of new systems based upon an IBM 4300 mainframe.

The computer applications involved are stimulating in both the business and technical sense and therefore applicants will find that the potential for their own development is fully within their control.

The importance that the company places upon this appointment is reflected in the attractive commencing salary which will be offered to the successful candidate.

REF: NW1/1311

SENIOR ANALYST/ PROGRAMMER

S.W. LONDON

C, £10,000

Reporting to the Director of Computer Systems, the successful applicant will be responsible for establishing the consultancy division of a major financial organisation. Having recently installed a powerful mini computer, the Data Processing Department is expanding to form a telecommunications network with VDUs and terminals at remote site.

All program development will be in COBOL with applications taking advantage of real-time and database techniques and this position will require a high degree of customer liaison for system definition and implementation.

The Company enjoys ultra-modern office accommodation and a full range of employee benefits is provided.

REF: S1/1311

POTENTIAL SALES CONSULTANTS

READING BASE

£7,500-£9,000
1st year package

Here is an opportunity for self-motivated and ambitious persons with a sound general appreciation of computing, to move into a highly rewarding sales role within the computer industry.

Based at offices in Reading you will become responsible for selling to computer users in all sectors of the industry. You will therefore need broad computing experience gained in programming, systems or consultancy and are likely to be in your mid-twenties with the drive and ambition to succeed in an environment where success is directly related to results. The company offers a good base salary, generous commission with no limit on earnings and valuable conditions of employment.

Telephone now, quoting reference SW1/1311/CW to discuss these openings in detail, and take the first step towards a rewarding future.

PROJECT MANAGERS ANALYST/PROGRAMMERS TEAM LEADERS

C. LONDON

£8,000-£12,000

The retail industry is becoming increasingly sophisticated and is still growing healthily. Our Client, a frontrunner in this industry and a household name has a vast number of outlets with a wide geographic spread. The growing size and complexity of their retail operations has led them to embark upon a major project to extend their interactive communications system.

This ambitious project has created the need for additional Analyst/Programmers, Project Managers and Team Leaders with a commercial systems background. Analyst/Programmers should possess a minimum of TWO YEARS' COBOL experience.

A substantial benefits package together with competitive salaries combine to make this an attractive opportunity to secure your future.

REF: C1/1311

MYRIAD APPOINTMENTS LIMITED
30 Fleet Street London EC4Y 1AA Telephone 01-353 0981 24 hours

FINE FARE

WELWYN GARDEN CITY

PROJECT LEADERS

AROUND £10,000 p.a.

Our client is Fine Fare Limited, one of the largest food retailers in the UK. They have depots and supermarkets from Scotland through to the West Country and they control their operations using sophisticated computer systems based on a range of technically advanced hardware.

This is computing at its best, requiring high calibre people to develop and lead major new projects.

They wish to recruit two senior systems analysts who are each capable of leading a project team. The technology may be high but commonsense systems are still the order of the day.

One senior analyst will work on head office systems involving financial control and management information. Familiarity with database techniques and a good understanding of project planning and control are required.

The other senior analyst will work on distribution systems which are largely mini-computer based. Previous experience of stock control systems would be advantageous particularly if coupled with remote processing.

The company will pay very competitive salaries and there is a range of big company benefits which includes help with relocation costs in appropriate cases.

For more information on these excellent opportunities contact our client directly: Mike Bradley, Computer Systems Development Manager, Fine Fare Limited, Gate House, Fretherne Road, Welwyn Garden City, Herts. Telephone: Welwyn Garden City 28140 Ext. 121.

Get the Abbey Habit

in London NW1

The Abbey National Building Society continues to be in the forefront in its use of data processing for all its operations. The Society currently supports a Real-Time System for its extensive branch network

which is based on a Univac 1100/81 central computer with Creed 2300 branch terminals.

To further improve its customer service and operational efficiency the Society has recently embarked on a major redevelopment of this system involving the introduction of advanced terminal and telecommunications equipment.

To assist in this major undertaking we are seeking the following data processing professionals:

ASSEMBLER/COBOL PROGRAMMERS
(Salary from £7500 to £9500 p.a.) and benefits including preferential mortgage terms

The successful applicants should have a sound education, be preferably under 30 and possess the character and ambition to progress their career rapidly.

The work is challenging and offers rewarding prospects for those applicants who show the aptitude and flair for involvement in all stages of project development.

At least 2 YEARS APPLICATION PROGRAMMING experience on mainframe or advanced terminal systems is required. Any practical knowledge of structured programming or database techniques would be advantageous.

SOFTWARE PROGRAMMERS
(Salary from £9000 to £11000 p.a.) and benefits including preferential mortgage terms

The successful applicants will have a challenging role at the heart of our Central site developments which will encompass major changes to our communication processing and Real-Time applications.

As such the applicants must be highly self-motivated and should ideally possess at least 2 YEARS UNIVAC ASSEMBLER PROGRAMMING experience and a sound knowledge of UNIVAC Job Control language.

Some practical knowledge of one or more of the following would be advantageous:

1. Communications - CMS; TIP; TELCON
2. Database - DMS 1100; RPS; QLP
3. Operating System - OS/1100/EXEC 8

Interested?

In addition to the advantageous mortgage rates, benefits include excellent pension scheme, flexible working hours, subsidised BUPA membership, season ticket loan, 21 days annual leave, social amenities etc.

For further technical information about these jobs please telephone Roh Farbrother, Deputy Systems Manager on 01-486 5555 Ext. 3393.

For an application form telephone or write to:

Mrs F. H. Wakefield, Senior Personnel Officer, Abbey National Building Society, 27 Baker Street, London W1. Tel: 01-486 5544 Ext. 477.

SYSTEMS ANALYSTS
(Salary from £8000 to £11000 p.a.) and benefits including preferential mortgage terms

This is a unique opportunity to join a young and dynamic Systems Department and progress your career in the areas of Real-Time, advanced terminals and database applications. Ideally you should be a graduate, under 30, and have at least 2 YEARS SYSTEMS ANALYSIS experience preferably in a financial environment.

Any practical experience in the design, development and maintenance of DATABASE Systems would be advantageous.

Essential personal qualities include a sound business acumen, good communicative skills, and above all the drive and stamina necessary to implement projects within tight deadlines.

JBA

MIDLANDS AND NORTH

Systems Engineer

East Midlands £6,500 - £8,500

This company, a very successful organisation, and at the forefront of its field, wish to recruit a Systems Engineer to be responsible for the support of its manpower resources.

Applicants should ideally possess good COBOL and/or low-level programming experience gained on IBM, ICL, HONEYWELL, or UNIVAC equipment. Knowledge of payroll, pensions, personnel applications would be a distinct advantage. The ability to communicate at all levels and perform an effective "trouble-shooting" role is essential. Excellent relocation package and benefits.

Senior Programmer

Gloucestershire £7,000 - £7,500

Our client, the market leader in its field and a division of a large and successful international group, have a vacancy for a Senior Programmer.

Candidates should be educated to A Level and possess 2 years COBOL programming experience, preferably on ICL 1900 or 2900 equipment. Knowledge of PLAN and FORTRAN would be useful but not essential. This is an excellent opportunity to work on challenging projects in a purposeful atmosphere. Re-location and large company benefits.

Application Software Sales

London, Scotland, S.W. England earnings £18,000+car

A company whose software applications products have enabled them to establish an enviable reputation throughout the U.K. seek further marketing representatives in the above areas.

Applicants should have D.P. Sales experience but those currently occupying related positions will receive serious consideration. The successful candidates must have the ability to deal with client personnel at all levels and will possess a steady and dependable attitude towards maintaining sales performance. Effective formal training is available as appropriate. Excellent incentives supplement a high basic salary.

ELLSMERE PORT AND NESTON BOROUGH COUNCIL

PROGRAMMER/ANALYST PROGRAMMER

GRADE: AP3/5 - £4,581-£6,381 (pay award pending)

The Council is offering exciting development prospects with places which include the provision of interactive computing facilities on a number of major systems. The appointees will play a significant role in the development of these systems. Salary and the duties of the post will be according to experience. Temporary accommodation will be considered in appropriate cases.

Details and application forms are obtainable from: B. A. Lucking, Personnel and Management Services Officer, Municipal Offices, 4 Civic Way, Ellsmere Port, South Wirral L68 0BE. Tel: 051-366 3665 Ext. 66. Closing date: 28 November 1980. Carveasing disqualifies. (3588)

PROGRAMMER

Rosser and Russell Ltd., a leading building services engineering company is currently upgrading to an IBM System 34.

An experienced RPG2 Programmer is required to join a small DP team and supervise the computer operation whilst implementing and improving systems.

Knowledge of FORTRAN and systems analysis would be useful. In this new position which provides excellent scope for career development.

Please write or phone with details of age and experience to Diana Field, Group Personnel Manager, Rosser and Russell Ltd., Ousey Caroline Street, London W6 8JL. Tel: 01-748 4131. (3528)

Recruitment LOGISTIX in Informatics

Datapoint Progs/Analysts

Belgium: Salary to £16K

Our client, one of the leading Total Systems Suppliers in Continental Europe is seeking several Programmers or Programmer/Analysts to join the Company on a permanent basis. Our clients are developing both on-line and distributed processing systems on recently installed Datapoint hardware. The applications involved are in the area of Sales/Purchase Ledger, Stock Control and Parts Inventory, Budget

and Trend Forecasting. A proven ability or strong desire to act in both pre-sales and customer support roles is a decided advantage. There is a strong preference for candidates who have current or very recent programming experience in an on-line Datapoint installation. First interviews will be held in our offices after which selected applicants will visit the Company's Head Office.

Ref: L/46/A

Financial Systems

City: Salary to £15K

Our client, a City based Systems Supplier and Software House, has an enviable reputation for its professional services to companies both within "The Square Mile" and the manufacturing process sector. Additional Systems Designers and Project Analysts are sought to join specialist teams involved in a diverse range of projects. Suitable candidates will have at least three years

Analysis or Design experience in one or more of the following fields:— Merchant Banking, Foreign Exchange, Portfolio Investment/Management, Life Assurance or Material Requirement Planning and Production Control. All positions will entail a high degree of client liaison and personal communication skills are therefore essential.

Ref: L/46/B

Telecomms and Networks

W. Germany: Salary to £18K

System X is universally recognised as THE telecommunications system for the '80's and '90's. Such is the high regard for System X that we have been requested to recruit Specialist Software Communications and Networking personnel for development projects in three West German cities. The Company's general specification includes current software development experience with telephony and digital system software. Particular hardware exposure is

less relevant than applications knowledge but familiarity with VAX 11/780, Intel 8085/86 or Motorola 6800 will be a distinct advantage. Successful candidates will be well remunerated (even by German standards). Additionally, all Company employees receive Christmas and holiday bonuses. Full relocation expenses will be met. It is useful for social and cultural reasons to speak German although the working language is mainly English.

Ref: L/46/C

Systems Progs/Analysts

Essex/Herts Border: Salary to £11K

Outstanding opportunities have arisen for Systems Programmers and Systems Analysts to work on our client's new IBM 4341 installation on the Hertfordshire/Essex border. As a member of a small team you will assist in setting-up a new department to service various User groups within the company. Projects will range from the design through to the implementation of specific systems for commercial applications including Stock Control,

Order Entry and Invoicing. All candidates should have an IBM orientated background and of particular interest will be those who have an extensive knowledge of CICS. It is essential for Systems Programmers to be familiar with the internals and SYSGEN of DOS/VSE operating system. Our client is keen for all employees to develop their individual careers and efforts are rewarded with an excellent remuneration package.

Ref: L/46/D

Process Control Programmers

Greater London: Salary to £10K

A well established Systems House specialising in the supply of Industrial Process Control Systems requires a number of real-time Programmers to join its Customer Support or Software Development teams. Fluency in English is essential and knowledge of KTL, Coral or Fortran will be an advantage. Those applicants who have

worked with a manufacturer or have exposure to Kent, Farnborough, or Farnham based systems will be particularly welcome. As the company has a number of overseas offices, candidates who express an interest in relocation to an E.E.C. country will be offered the opportunity to do so.

Ref: L/46/E

Mini/Micro Assembler

Holland and Italy: Pkg. to £15K

One of Britain's leading Systems and Software Houses, with a substantial overseas presence, urgently requires Programmers and Senior Programmers to join existing project teams operating from its Dutch and Italian offices. Whilst the more junior posts are open to those who have been programming in a real-time environment for at least 18 months, applicants for the senior positions

will be required to offer a minimum of 3 years programming experience combined with actual or potential managerial skills. Exposure to particular hardware is not a limiting factor but preference will be shown to those familiar with either PDP11 or microprocessor based systems.

Ref: L/46/F

Telephony - S/W Designers

W. Home Counties: Salary to £12K

An established world leader in telecommunications products is seeking Software Designers and Senior Software Designers to join project teams at its recently opened U.K. offices. With a growth record second to none and a planned European wide expansion programme the company is able to offer outstanding career opportunities. At least two years experience in the design

and development of specialised software for PEX or PBX systems is essential. Particular hardware experience is not important but familiarity with PDP11 or a leading microprocessor would be advantageous. Candidates able to demonstrate a knowledge of digital hardware concepts will be especially welcome.

DIGITAL COMMUNICATIONS LIMITED

DATA COMMUNICATIONS ENGINEERS

NORTH LONDON - N.W. ENGLAND - SCOTLAND

Gandalf Digital Communications Ltd. is a U.K. manufacturer and supplier of modems, multiplexors and Data exchanges.

Continued success and a rapid growth has created several vacancies in the field service division.

Successful applicants will be responsible for installation, sales support and maintenance of the various data communications devices in the above areas.

Candidates should be educated to HNC or equivalent standard and be familiar with both analogue and digital electronics. Previous experience in Data Communications would be an advantage.

The Company offers an excellent salary plus quality car, free life insurance, first-class terms and conditions.

Please telephone for an application form or write with details of age, experience and qualifications to:

Mrs. Jean Massey
GANDALF DIGITAL COMMUNICATIONS LTD.
4 Cranford Court
Hardwick Grange, Woolston
WARRINGTON, Cheshire
Tel. Padgate (0925) 817755

(1560)

The AEW Nimrod real-time system.

The most challenging systems project
you could ever work on.

There's nothing in the world like the real-time data processing system that's the heart of the Airborne Early Warning Nimrod.

That's fact, not opinion. The system handles all the data from one of the world's most advanced radars, from the aircraft's communication equipment and instruments, and from other sensors. It operates within the strictest definition of real-time, and to the highest standards of software integrity.

If you're becoming increasingly frustrated with designing and implementing systems that all seem to have much the same applications, come and work on the AEW Nimrod software and its associated proving facilities.

You'll be more familiar with the work than you might imagine - especially if you have a sound background in real-time systems and analysis.

But the one thing you won't be familiar with is the interest and satisfaction of becoming totally involved on a major system with a totally new application.

And on that score, few jobs can compete with these:

Mission Software Team Leader

The team that you will lead will produce mission software to enable air

crew in the AEW Nimrod to interrogate the central AEW database and central aircraft subsystems. You will understand the customer's operational and technical requirements and will liaise with hardware and design teams. You have had leadership experience and a knowledge of CORAL 66 and real-time systems.

Mission Software Engineers

You will implement mission software in a team which will provide operator facilities to air crew operating the AEW Nimrod. The software will run in the central computer and interface with both microprocessor based operator consoles and also complex electronic subsystems. You have at least 18 months' relevant experience with high level languages, preferably CORAL 66.

These are positions open only to men and women who have the relevant experience. Posts are also available in other sections for those with equivalent experience and for those employed in related fields who wish to broaden their experience.

Write giving brief details of your experience to C. Hill, Marconi Avionics Limited, Elstree Way, Borehamwood, Herts. Telephone 01-953 2030, extension 3449. Alternatively, telephone 01-207 3455 anytime. Please quote reference MA80/23.

Europe 81

I have recently returned from visiting a number of our clients in Europe and some of their vacancies are shown below. These jobs require top quality forward thinking candidates with degrees and solid career records.

The salaries offered will give successful candidates a substantially higher standard of living than they currently enjoy in the UK - living costs in France and Germany are NOT now significantly higher than in the UK. Whilst English is widely used, candidates should be prepared to learn the local language, since this will enhance their career prospects and help them settle into the local communities. Employers usually arrange language training for new employees. / Neville John.

For an informal discussion on any of these positions, please phone Neville John on (0270) 627 206 (day) or (0270) 628 369 (evening and weekend). Alternatively - complete and post the coupon below - we will be in touch. Initial interviews will be held in Nantwich or London, and final interviews at client locations soon after.

Brussels Ref. 205

The European data centre of this organisation is based on an IBM 370/158 (MVS, CICS, VSAM) but the hardware will be significantly upgraded in 1981, with the emphasis on the development of on-line systems.

Systems Programmer
CICS, MVS
to BF 950,000

Candidates should have a minimum of 3 years' systems programming experience of MVS or CICS together with good analytical and communication skills and potential for further career development.

Systems Analysts
to BF 950,000

You need at least four years' systems experience ideally including experience of an IBM OS COBOL environment on on-line systems. In addition, good communication skills and a keen interest in business affairs would be helpful.

Hamburg Ref. 201

This multi-national corporation has an IBM 3031 under OS/VS1 supporting a network of RJF terminals and with local and remote screens running under CICS. There are firm plans to upgrade the hardware and to convert to an MVS environment.

Systems Programmer/
Telecommunications Analyst
OS/VS1, CICS
to DM 65,000

Candidates should have thorough experience of systems programming in a TP environment, the ideal being at least three years' exposure to CICS and OS.

Systems Analyst/
Project Leader
to DM 65,000

The Senior Analyst should have several years' experience in analysis, design, programming and implementation of systems, ideally in an IBM installation. Applicants should be able to apply new methods and technology for systems development.

Dortmund Ref. 208

Real Time Specialists
to DM 60,000

Our client, a software house who are well respected and a major force in the German computer industry, is currently keen to expand existing teams working on basic software projects.

Candidates with the most relevant expertise will have three years plus experience in such areas as:

- Compilers
- Operating Systems
- Communications and Computer Networks
- Military Systems

All relocation expenses will be paid as well as assistance in learning German.

Mainz Ref. 203

Senior Analyst Programmer
PL1, ASSEMBLER
to DM 60,000

A major manufacturing organisation with an IBM 370/158 and 4341 is developing a range

of systems using PL1, ASSEMBLER, CICS and the packages COPICS and KAPOSS. Candidates should have a minimum of five years' sound programming and design experience, preferably in a manufacturing environment.

Worms Ref. 206

This data centre has an IBM 370/135 and 4341 running under DOS/VS, and will be converting to twin 4341's in due course. It supports a TP network throughout Europe, which will incorporate IBM 8100's in the near future.

Programmers
to DM 55,000

A minimum of two years' good quality IBM experience on on-line systems is needed. Ideally candidates would have experience of Assembler and CICS, but training would be given to above average candidates with other

experience, who can offer potential for promotion to a programming team leader level.

Technical Support
IBM DOS/VS
to DM 55,000

Forward looking candidates with extensive experience of operations and systems software are needed. The small team concentrates on planning, training, development of standards etc and plays a vital role in the implementation of new hardware and systems. Systems programming experience on DOS/VS is needed.

Epernon Ref. 207

This data centre, near Chartres, based on an IBM 158, is due for upgrade to a 4341 in 1981. It serves a number of locations of a multi-national corporation throughout Europe through its TP network, which will incorporate IBM 8100's in the near future.

Systems Analyst
to Fr 160,000

The analyst will require a minimum of 3-4 years' experience, the analytical and communications skills being more important than the hardware background. Candidates should have the qualities and potential to assume supervisory responsibilities in due course.

Programmers
to Fr 140,000

A minimum of two years' good quality IBM

experience on on-line systems is needed. Whilst the ideal candidate would offer Assembler and CICS, training would be given to above average candidates with other experience, who can offer potential for promotion to a programming team leader level.

Technical Support
IBM DOS/VS
to Fr 140,000

Forward looking candidates with broad experience of operations and systems software are needed. The small team concentrates on planning, training, development of standards etc and plays a vital role in the implementation of new hardware and systems. Systems programming experience on DOS/VS is needed.

Milan Ref. 209

Data Processing Manager
to \$50,000

An Italian speaking experienced DP Manager is required to take charge of a small DP

department, based on a mini computer linked to a mainframe at a distant data centre. There is a staff of about fifteen and candidates will be 28-35 with good managerial experience and the potential to move with the corporation's European development team in due course.

If you are unable to phone - please complete the coupon and send to:-
Neville John, OCC Computer Personnel (Northern) Ltd, 5 Hospital Street, Nantwich, Cheshire CW5 5RH.

HOLLAND & UK VIA I.A.

Industrial Artists has more challenging and rewarding positions on offer, both on its own staff AND ALSO on the permanent staff of its many clients. A selection from the most urgent of these comprises:

FOR HOLLAND, within the I.A. team but, based on the client's premises:
4300 SERIES COBOL PROGRAMMER with at least 3 years experience for a DOS/VS environment using DLH — applicants having 160168 experience will be seriously considered.

VM 370 COBOL PROGRAMMER with at least 3 years experience, for an OS environment. Knowledge of CMS/IMS & VSAM would be of distinct advantage and, any systems programming experience would be useful.

YOUNG TECHNICIANS (aged 20 to 25) having a good electronics background preferably to Degree (or close equivalent) standard, to TRAIN AS INSTRUCTORS over 1 to 2 years with a manufacturer of mini-computers.

Previous computer knowledge and/or experience is not sought in total but, that of DIGITAL TECHNIQUES and some of the BASIC language will be looked for.

TECHNICAL AUTHORS possessing at least 3 years experience of HARDWARE ASPECTS OF PRIVATE TELEPHONE EXCHANGES. Must understand digital techniques and micro-processor applications. Knowledge of dedicated systems & processing principles is desirable. Coverage of manuals to be written is hardware oriented both for total and sub-systems and their installation, maintenance and servicing — and for a new equipment for 50/600 subscribers.

3031 (or 158168) PL/I PROGRAMMERS having at least 3 years experience, including IMS and/or TSO, for an OS/VS environment and, preferably, with knowledge of SOCIAL INSURANCE and/or TIME REGISTRATION applications.

HONEYWELL BULL L44 & L66 ANALYSTS & PROGRAMMERS with a sound knowledge of COBOL, DM4 & IS/VS.

SYSTEMS PROGRAMMER with a first-class Assembler background and, preferably, a knowledge of SIEMENS SS2000 and CSAM for an immediate (or close to start).

For the above positions excellent salaries are on offer, including generous concessions negotiated with the Dutch taxation authority, four weeks paid holiday per annum, paid national holidays and certified sick time, a holiday bonus plus the full support of the administrative staff based in our Dutch offices.

MANAGER for SYSTEM DEVELOPMENT DEPARTMENT. Will hold responsibility jointly for total policy and completely for supervision of circa 175 staff engaged in development and maintenance of applications programs. Must be a proven manager who, although not a specialist, nevertheless has a reasonable degree of computer knowledge and experience. An academic or equivalent education is looked for and ability to either speak Dutch, or learn quickly, is mandatory. Basic salary package negotiable to Guilder equivalent of £21,000. Here location is Utrecht — and is a 'client permanent staff' position.

IN UK and for our clients' permanent staff:
1 DEC PDP 11/40 PROGRAMMER with minimum 1 year using BASIC+ Location: Bournemouth Salary: £8000

2 SYSTEMS PROGRAMMER with minimum 2 years Assembler. Salary: £9000
SYSTEMS ANALYST having 5 years experience and previous ± 2 years in programming is also held. Knowledge of Life Assurance application will be preferred. Salary: £78000
SENIOR OPERATOR with 2/3 years experience, plus the ability to write JCL. Salary: £58000
Positions are for a 3031 environment under OS/VS1 with CICS. Relocation allowances are available, plus subsidised mortgage facilities. Location: Bournemouth.

3 SYSTEMS ANALYST/PROGRAMMER for a SYSTEM 34 environment, with minimum two years RPG 11. Installation is new and the system has to be set up. Possibility of promotion to QP Manager within nine months. Travel to overseas locations may occur. Location: Malmesbury Salary: £8500-plus bonus.

4 TWO PROGRAMMING TEAM LEADERS with minimum 4 years experience. First required for 1903 PLANCO COBOL conversion and second for systems development. Salary: between £7,500 and £9,000 with January review. SENIOR PROGRAMMER with 2/4 years experience. Salary: £8500 with June review

PROGRAMMER with 1/2 years experience. Salary: £5700
Hardware 2860 under VME/B and COBOL. Some Fortran knowledge would be advantageous. 40 hour week with 8.15am start. Relocation costs available to householders. Location: Southampton

SENIOR SYSTEM ANALYST with minimum 4 years experience, preferably in manufacturing area. Salary: up to £9,500
SENIOR PROGRAMMER with minimum 3 years COBOL plus good TP. Salary: up to £7,700
Hardware ICL 2860 under VME/B and DME + minicomputers. Location: Basingstoke. Relocation allowance possibilities.

6 TWO SYSTEMS ANALYSTS — first with project control, DB/TP experience and professional qualifications. Second with expertise to help sell the time-sharing service. Salaries: between £8/9000 Relocation allowance possibilities. Hardware Honeywell L66 — with training if required. No programming involved. Location: Winchester.

7 TWO SYSTEMS PROGRAMMERS with minimum 3 years experience. In one case IBM background required, but Univas training will be given. Salary: £9000 max. THREE PROGRAMMERS with minimum 2 years COBOL upwards. Salary range: £7/8000

Hardware Univac 1100/82 with OS 1100 & TP
Location: Gatwick area

8 SOFTWARE AUTHOR with minimum 2 years writing, for commercial business applications (office automation) work. Software engineering background covering all the Operating Systems, Compilers, Communications, Business or Laboratory applications is essential. A Programmer, Analyst or Instructor having a proved command of written English could be considered. Location: Reading Salary: £5/8000 upwards.

SPECIALIST RECRUITMENT CONSULTANTS

CHESHIRE PROJECTS CONTROLLER

DEFENCE

c. £15,000

An interesting opportunity has arisen for a Projects Controller to assume responsibility for all aspects of defence contracts for a well-known systems house.

Reporting to the Production Director, you will be responsible for the control and monitoring of several projects, including project resourcing, customer liaison on contracts and evaluation of bid prospects.

We expect you to have at least 10 years' Real-Time experience of high integrity, high availability systems in defence environment. This should include:

- * Knowledge of command and control, communications and retrieval systems.
- * An understanding of defence study methodologies and familiarity with defence standards and controls.
- * Defence project management experience.

For further information please contact MARK IRENS, quoting reference CW1311/3.

SOFTWARE TEAM LEADER

PDP11/44's, VAX, INTEL 8086's, CORAL, MASCOT, ADA

REAL-TIME SYSTEMS

£8,000-£10,500

LONDON

A leading systems house is now entering the development phase of one of the most complex military command and control systems ever conceived.

The software team leader will lead a team of about five Programmer/Analysts in the area of TERMINALS and PERIPHERALS: specifically the design and building of the man-machine interface software to integrate peripherals, such as super-intelligent VDU's, hand-held devices and graphic VDU's and plotters, into the very large and complex multi-micro Real-Time System.

This is an opportunity which should appeal if you are looking for your first leadership role and have the following background:

- * At least 2 years' experience of implementation of Real-Time Systems on minis and micros, preferably in a military environment.
- * Knowledge of peripherals, hardware and software.
- * CORAL or MASCOT experience.
- * A good degree in computer science, electronic engineering or similar.

For further information please contact MARK IRENS, quoting reference CW1311/4.

SPECIALIST RECRUITMENT CONSULTANTS

Computer Sales Professionals

A good plug for a new product means much more than a bonus for you.

Selling our brand new PTS-2000 terminal system, you'll have a strong promotional package to rely on, and much more.

The PTS-2000 has several features which make it a unique terminal system. For a start, it's plug compatible with the new IBM 3274/76. And, as the industry's most advanced interactive system, considerably more cost-effective than existing equivalents. We can also deliver the PTS-2000 almost as fast as you can sell it.

From your point of view that means you'll be selling the best product on the market, one with enormous potential for the next decade. With a basic salary of £8,500 plus a car, you'll be earning around £17,000 for on-target performance, and we operate an open-ended bonus scheme.

At the moment we need three sales professionals with successful DP sales records — two to cover the London area, another the South West of England. You should preferably have been in terminal selling, but any DP experience is acceptable. Technical knowledge is not as important as proven sales expertise. And you should have the confidence — and ambition — to progress eventually to sales management. As a major force in both hardware and software markets we can offer particularly good career prospects within our own organisation and beyond in the Raytheon Group.

Either write with full details or phone for an application form to:
Ann Fortescue,
Recruitment Officer,
Data Logic Limited,
29 Marylebone Road,
London NW1.

McDERMOTT SCOTLAND
(Division of McDermott International, Inc.)

ANALYST/PROGRAMMER

McDermott Scotland, world leaders in the fabrication of Offshore Oil Production Platforms and related structures, have a vacancy for an Analyst/Programmer at their Ardersier Fabrication Yard, located 15 miles from Inverness.

Our present installation comprises an IBM 370/125 (DOS/VS, POWER/VS and VSAM) with a TP link to IBM 4341 in Brussels. CICS/VS has been installed and various engineering and commercial applications are under development.

Applicants should be educated to at least 'A' level standard with a minimum of 2 years' experience ideally in a DOS/VS environment similar to the above. Additional experience in structured programming and tele-processing techniques would be advantageous.

Successful applicants would initially join our development team as Programmers, but would be encouraged to develop analytical skills and to accept additional responsibilities within the team.

The terms and conditions of employment are excellent and a generous relocation package is available. For further information and an application form, please write giving career details to:

SOUTH WALES CONSTABULARY
FORCE TECHNICAL
COMPUTER OFFICER£8,328 to £9,330
(Pay award pending)

The South Wales Constabulary are seeking an experienced computer professional to fill the new post of Force Technical Computer Officer at Police Headquarters, Bridgend.

The Force Technical Computer Officer will assume technical control of a computer-based Command and Control system utilising a dual processor system supporting sixty Visual Display Units and forty printers, for which a contract is about to be awarded. He/she will be expected to liaise with police officers at all levels and give technical advice on problems arising with the operation of all the computer equipment associated with the South Wales Constabulary.

Applicants should have a relevant degree or professional qualification and considerable experience of the design and programming of dedicated real time systems using mini computer hardware.

The position is suitable for a person currently in a senior technical support position seeking wider managerial and technical responsibility.

Write or telephone for an application form to The Chief Constable, South Wales Constabulary (Computer Project), Police Headquarters, Bridgend, CF31 3SR. Telephone 0656 55555 (extension 361/362).

Closing date for applications Monday, 24th November, 1980. (3678)

Computer Technician—T2

A new post in our Computer Centre for maintenance of terminal and peripheral equipment of all kinds, clearing faults wherever possible etc.

Salary: T2 £3,990 to £4,476.

We are offering Peanuts

(and a bottle of beer/glass of wine)

TUESDAY 19 + WEDNESDAY, 19 NOVEMBER
Civic Centre, Station Road, Harrow

So why not come along and have an informal chat with us over drinks & snacks on TUESDAY 18 & WEDNESDAY 19 NOVEMBER from 4 to 9 p.m. We are holding open evenings of our offices in the modern Civic Centre in Station Road, Harrow, one minute from Harrow & Wealdstone Station. If you can't make it, call our Computer Manager, Gerald McDonough on 01-863 5611 and he'll arrange a more convenient time. Either way we could have a lot to talk about. If you prefer, written applications should be sent to Gerald McDonough, PO Box 21, Civic Centre, Harrow, Middlesex.

At the London Borough of Harrow we've expanded our computer function. The IBM 4341 has just been installed and is operating under VM and DOS/VSE, providing both batch and on-line service; and teleprocessing is under the control of SHADOW II. We'll also be using both database and teleprocessing techniques.

This is all part of a newly organised structure, created to develop and install new projects. Our applications include Libraries, Forward Planning, the Area Health Authority, the Electoral Roll, the Engineering & Architects departments as well as Financial applications. To carry through this ambitious plan we need first-class and experienced men and women.

Systems Analyst — up to £10,500

Liaising directly with our user departments and defining their requirements, you'll also be responsible for design, implementation and maintenance of systems.

Don't Monkey about,
See you on Tuesday or Wednesday

CITY

Our client, a leading service organisation with some of the most up-to-date techniques in technical research and development, are seeking the following staff. The Company operates worldwide and uses an IBM 3033-N8 computer.

TECHNICAL
JUNIOR TECHNICAL PROGRAMMER

To £6,500

For this position, you must have a degree in either Engineering, Maths, Computer Science or other scientific subject. Applicants must have 6 to 12 months' experience in some or all of the following: IBM 360/370 — Hewlett Packard 9830/45 BASIC — FORTRAN — JCL — TSO.

TECHNICAL PROGRAMMER

To £8,000

A graduate is required again with the above specifications, but applicants will need to have 1-2 years' experience of Engineering applications.

COMMERCIAL

Prospects within the Company are excellent for people with drive, enthusiasm and initiative. These vacancies have arisen due to the need for new systems development.

PROJECT LEADER

To £11,500

Applicants must have at least five years' systems analysis experience covering medium to large systems from feasibility through to implementation. Experience of managing or leading a project team is vital.

SENIOR SYSTEMS ANALYST

To £10,500

At least four years' experience as a Systems Analyst is required for this position, including experience of developing and implementing large systems. Experience of database techniques and terminals an asset.

SYSTEMS ANALYST

To £9,500

Only two years' systems analysis experience is required, including some involvement in medium to large systems.

If you are interested in applying for the above positions, please send us your FULL C.V. or phone for an Application Form.

THE SALES BIT

How to make time your most valuable asset

TIME is the salesman's most valuable asset. His greatest responsibility is to utilise it in the most effective manner.

This demands considerable thought, dedication, and above all efficient planning. Whatever objectives a salesman may have, the route to success can be described in elements of time.

The effective use of this time is dependent on attitude, habit and possibility horizons.

Take, for instance, planning to achieve sales target at the beginning of a new target year. The route to achieving total sales quota can be expressed in terms of an approximate number of orders, based on the typical value of an individual sale.

Using the experience of the previous sales year, these can be described as a proportion of the required number of prospects available for conversion, which in turn can be derived from a much larger quantity of suspects which emanate from initial pioneering work.

Awareness

These possible sources of business are then a function of the number of calls which can feasibly be made in a working day, and this is clearly derived from the amount of time available.

The effective use of the salesman's working day is a function of many factors: journey planning; scheduling of appointments; controlling the duration of sales call and so on. However, above all it is dependent on having a real awareness of the amount of time actually available for selling.

For instance, many salesmen believe that selling cannot generally be conducted on Monday mornings, Friday afternoons, before 10am or after 4.30 pm and between the hours of noon and 2.30 pm; the notable exception being the occasional lunchtime appointment which is often related more to self-indulgence than selling.

The very fact that this belief is so widespread makes these apparently unavailable hours of business particularly fruitful to the more objective salesman.

First

It also makes me wonder whether the typical lack of face-to-face sales activity at the beginning and end of the week is more a function of inadequate salesmen than reluctant buyers.

The most important call is the first call of the day, for it tends to dictate the pattern of subsequent sales activity.

A familiar and extremely negative approach to planning sales calls is to assume that everyone has masses of post to process every day which excludes all other events until it is cleared.

Another negative assumption, particularly in London, is that most people do not reach their offices until after 9.30 am.

The answer is quite simple: Always try to make the first appointment each day for 8.30 am. You will soon discover, and therefore be able to note, which people are usually around at that time. You will be surprised how

many bosses normally arrive at work before 8.30 am, or are willing to come in a little earlier to see you. Most organisations do not finish distributing their mail until well after 9.30 am which gives plenty of time for discussion before the postal ritual.

Determined

Appointments after 4.30 pm are typically more difficult to arrange than in the early morning, but nevertheless many bosses are prepared to stay until 6 pm and beyond if they believe they can discuss a product which might be beneficial to their company, particularly with someone who is also prepared to give up a little of his own time.

As for lunchtime, the determined and well organised salesman can often work right through the lunch period if need be. This ability is purely a function of keeping effective client records.

There are two fairly consistent features of lunch periods. They normally last for one hour and typically begin any time between noon and 1.30 pm, so many people have returned from lunch before others have started. The question is who lunches when, and that is where detailed client records are essential.

Most salesmen within the computer industry could significantly increase their selling call rate by utilising their selling time more effectively, with obvious rewards in terms of sales achievements.

Of course there are many disciplines and techniques which can improve sales efficiency, but none can bring more significant results than simply getting to the first call by 9 am at the latest every day, knowing which clients lunch when and having an open mind about proper and improper times to call.

TRADER

COURSES

A SERIES of computer training courses is being held by LBMS in December. From December 8-12, a course entitled Database Development Workshop will be held in Bournemouth. It is aimed at DP staff working on database development projects. The fee is £375 + VAT. Between December 15-17, an introduction to computer systems, data processing and system development methods will be held in London. Called User Involvement in Computing, the fee is £190 + VAT. For further information about these and other courses, ring the registrar on 01-637 9699.

A COURSE entitled The Electronic Office is being run by The Institute of Chartered Accountants of Scotland. Information will be given on the use of new technology in the office, including word processors, microcomputers and videotext. The course will be held between 9.30 and 5.00 on November 25 at the Albany Hotel, Bothwell Street, Glasgow. The fee is £40.25, including VAT. Further information from the director of post-qualifying education, the Institute of Chartered Accountants of Scotland, 27 Queen Street, Edinburgh EH2 1LA.

Puzzle Answer

ALL such areas are exactly divisible by 6, so 680 is the number that was added.

CITY OF COVENTRY TILE HILL COLLEGE OF FURTHER EDUCATION Principal: Dr. H. E. Avey LECTURING IN COMPUTING/DATA PROCESSING

You may not have thought of a move into education but it's well worth considering now. This could be the stage in your career when you're looking for a fresh challenge. Computing in further education is a developing subject in an expanding field and offers sound career potential.

At Tile Hill College of Further Education we are looking for a Lecturer in Computing for our Business and General Studies Department to commence as soon as possible.

The man or woman we are looking for will be required to teach data processing and computing to students following Business Studies courses.

Applicants should have relevant industrial/commercial experience and be suitably educationally qualified.

You'll be working in a large, modern college with excellent working and recreational facilities situated in a pleasant part of Coventry.

Salary up to £8,000 per annum.

Further particulars and application forms obtainable from the Principal, Tile Hill College of Further Education, Tile Hill Lane, Coventry CV4 9BU.

(1578)

NATIONAL INSTITUTE FOR RESEARCH IN BARRY

COMPUTER RECORDS OFFICER

A vacancy exists in the Data Record Office for a person with experience in computer programming to take daily charge of the departmental Records Office. The Records Office staff collect, check and process the data from health, reproduction, live-weight, stock numbers derived from the computerised data. The person appointed should have experience in computer programming (Fortran) and be able to maintain existing records and produce computer printouts to meet various research and farm management requirements. A knowledge of agriculture would be an advantage but is not essential. The post provides excellent opportunities in the developing field of the use of computers in agriculture. Qualifications: Degree in scientific subject or HNC with relevant experience.

Appointments will be at Scientific Officer (£4,000-£4,800) or Higher Scientific Officer (£6,000-£7,000) according to qualifications and experience. At least five years appropriate post-graduate experience is required for appointment at Higher Scientific Officer. Non-contributory superannuation.

Application forms are obtainable from the Secretary, NIRD, Broomfield, Reading RG3 9AT.

Quota reference 80/4.

FIELD SERVICE ENGINEERS

£8,000 + O/T + S/B + CAR CHOICE

Fabulous opportunity to join a leading manufacturer of a wide range of prestige main computers and peripherals. Excellent prospects in this above average growth (42% increase in turnover plus two new launch offers plus 21 new product launches all in the last year) helpful friendly young management.

Basic salary £8,000 plus overtime plus car plus training. If you are ambitious, feel capable of assuming responsibility, why not take that all-important step forward - if living in London or Home Counties, call us today, but hurry! Ref. EK2014.

AB EXECUTIVE (KINGSTON) LTD. 01-549 6441

TRAINEE COMPUTER AND TELECOMMUNICATIONS ENGINEERS AND A REPAIR TECHNICIAN IN LONDON

UP TO £8,000 PLUS A CAR

Comshare is one of the top companies in the European computer timesharing industry with an intelligent data communications network which interconnects computer centres in North America, the United Kingdom, Europe and Canada.

Presently our typical Computer Systems consist of several large dual Sigma 9 mainframes with Ampex 512K, 32 bit word memories and Honeywell 4, 096K, 32 bit word memories, Memorex disc drives, STC 6250 bpi tape drives and Data Products printers.

We are currently looking for:

TRAINEE COMPUTER ENGINEERS AND A REPAIR TECHNICIAN

Engineers should have electronic knowledge and preferably some computer mainframe and peripheral experience.

A Repair Technician should also have electronic experience and be capable of fixing computer modules and power supplies as well as assisting with stores and spares.

We will provide Engineers with training where applicable, following which successful persons will become members of the engineering team which is involved in installing, commissioning

upgrading and maintaining our systems

TELECOMMUNICATIONS ENGINEERS

Applicants should be highly motivated with HNC or equivalent in Electronic Engineering and a minimum of two years solid experience in a data communications environment.

You will join a team of professional engineers with full responsibility for the 24 hour operation of the existing data communications network. Activities will include installation and maintenance of network hardware such as mini-computers, multiplexors and modems. Ability to fault-find to component level is essential.

These new opportunities offer career advancements to men or women in a fast moving environment, where exciting plans are shaping for further expansion into Europe.

Starting salaries will be up to £8,000 plus a car with overtime payment, and the fringe benefit package includes BUPA, LVs and a good pension scheme.

For Computer Engineers and Repair Technicians, contact Pete Mills. For Telecommunications Engineers, contact Ray Miles, both on 01-351 4399. Or write to them at Comshare Limited, P.O. Box 197, London SW3 5RL.

PROGRAMMER/ANALYST

The Service provides practical computing facilities to students through a nationwide time-sharing network of DEC-system 20 computer systems as well as a computing service to staff and full-time research students of the University.

A vacancy exists for an experienced Programmer/Analyst with a sound technical computing background to join its Systems and Programming Group. The work of the Group embraces developments in the areas of course production, student support, institutional research and computer based research and development projects. Initially the successful applicant will work on the further development of Optal, a computer based information retrieval system along the lines of Pascal.

An appointment will be made within the scale £8,505-£9,596 (under level), plus membership of the Universities Superannuation Scheme. The University offers attractive working conditions including six weeks' annual leave plus assistance with relocation to the Milton Keynes area.

Application forms and further particulars are available from The Administrative Assistant (888/2), BCS, The Open University, Walton Hall, Milton Keynes MK7 6AA (telephone 0906 66385); there is a 24-hour answering service on 853881. Closing date for applications is 8th December, 1980.

Heavyweights & Middleweights

£10,000-£12,000 p.a. Aged 23-30

You're ambitious, an astute communicator, a natural thinker and doubtless well respected in your present company. Now you are looking for a career move which will provide the opportunity to develop your abilities for better recognition and reward.

Right now, our clients are looking for the following people to join their highly successful operation which provides specialist DP and management services to a major international consumer products group.

Team Leader

To head up an experienced technical team developing one of our many new computer systems.

Analyst/Programmers

Professionals who can establish effective user relationships and support for our batch and timesharing systems.

Our clients hardware includes an IBM 3031 and a 370/158 running OS/VS1, VM and DOS/VS. On-line processing is based on a CICS teleprocessing network and distributed systems development is a key feature of the short term strategy.

In terms of personal rewards, you'll find this offer hard to beat. Salaries will be between £10-£12,000 p.a. together with a valuable range of fringe benefits. There are varied opportunities for career development, all of which offer first class progression.

If you are a young, determined professional, preferably a graduate with ideally 3-5 years experience, you should find out more about these exciting opportunities.

For more information, telephone in complete confidence to: R. Wareham on (01) 631 4411. If you prefer, write with brief details of your experience to him at Moxon, Dolphin & Kerby Ltd, 178-202 Great Portland Street, London, W1N 8TB, quoting ref: RW/734/CW.
